

Ecological Succession Lab

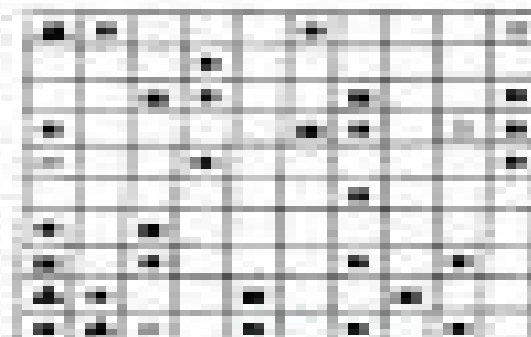

Investigate how the tree logs you will study reflect your forest's history and provide information on the ecological changes that succession has experienced. After only 5 years, substantial types of trees have begun to grow where there were once only tree stumps. By examining the number and types of species that grow in this field (1, 10, 50 and 100 years after disturbance),

investigate the five fields (Figure 1-5), record the number of each species of tree and record on the field survey data form as provided. Add up all of the trees for that field and record number of trees. Then add these numbers from percentage of each tree species in each field, determine percent, then find following formula: Number of species in 100% of trees in _____ of 100% is _____%
