### TESTING AND VERIFICATION REQUIREMENTS

1. Test for full de-energization by turning normal operational controls to the on (or neutral) position and verifying that no machine function or movement occurs.
2. If possible contact with exposed electrical conductors could occur, a qualified person must perform electrical voltage testing to verify zero energy condition.
  - Return all controls to the off position and complete all necessary adjustments or repair work.
3. During testing and adjustment, Lockout must be re-applied when contact with hazardous area(s) is required.

**LOCKOUT REMOVAL PROCESS** (Use this Procedure to be sure each locking device has been removed and that each energy source has been restored according to the normal startup Procedure)

- |                                                   |                                                           |
|---------------------------------------------------|-----------------------------------------------------------|
| 1. Ensure all tools and items have been removed.  | 4. Verify that controls are in off position.              |
| 2. Confirm that all employees are safely located. | 5. Remove lockout devices and reenergize machine.         |
| 3. Ensure all safety guarding has been replaced.  | 6. Notify affected employees that servicing is completed. |
