Building An Intelligence Led Security Program:

Building an Intelligence-Led Security Program Allan Liska, 2014-12-08 As recently as five years ago securing a network meant putting in a firewall intrusion detection system and installing antivirus software on the desktop Unfortunately attackers have grown more nimble and effective meaning that traditional security programs are no longer effective Today's effective cyber security programs take these best practices and overlay them with intelligence Adding cyber threat intelligence can help security teams uncover events not detected by traditional security platforms and correlate seemingly disparate events across the network Properly implemented intelligence also makes the life of the security practitioner easier by helping him more effectively prioritize and respond to security incidents The problem with current efforts is that many security practitioners don't know how to properly implement an intelligence led program or are afraid that it is out of their budget Building an Intelligence Led Security Program is the first book to show how to implement an intelligence led program in your enterprise on any budget It will show you how to implement a security information and event management system collect and analyze logs and how to practice real cyber threat intelligence You'll learn how to understand your network in depth so that you can protect it in the best possible way Provides a roadmap and direction on how to build an intelligence led information security program to protect your company Learn how to understand your network through logs and client monitoring so you can effectively evaluate threat intelligence Learn how to use popular tools such as BIND SNORT squid STIX TAXII CyBox and splunk to conduct network intelligence
