

Doppler shift and velocity

Now assume relative motion between the target and the radar such that the range, R , and phase, ϕ , change with time

$$\frac{d\phi}{dt} = -2\pi \frac{2}{\lambda} \frac{dR}{dt}$$

Since frequency is the time derivative of phase, the received frequency differs from the transmitted frequency by the *Doppler frequency shift*, f_D , (note: division by 2π to convert angular frequency to standard frequency)

$$f_D = \frac{1}{2\pi} \frac{d\phi}{dt} = -\frac{2}{\lambda} \frac{dR}{dt}$$

or

$$f_D = -\frac{2v_r}{\lambda} \text{ [Hz]}$$

where v_r is the radial velocity [m/s].

remains one of the most practical and solution oriented resources available to graduate students and professionals The newest edition includes comprehensive revisions that reflect progress in the field of electro optical instrument design and construction since the second edition was published It also offers approximately 350 illustrations for visually oriented learners Readers will also enjoy A thorough introduction to basic optical calculations including wave propagation detection coherent detection and interferometers Practical discussions of sources and illuminators including radiometry continuum sources incoherent line sources lasers laser noise and diode laser coherence control Explorations of optical detection including photodetection in semiconductors and signal to noise ratios Full treatments of lenses prisms and mirrors as well as coatings filters and surface finishes and polarization Perfect for graduate students in physics electrical engineering optics and optical engineering Building Electro Optical Systems is also an ideal resource for professional designers working in optics electro optics analog electronics and photonics *Electronics & Wireless World* ,1989 **Car and Driver** ,1980

Discover ,1994 *A New Doppler Effect* Florian Ion Petrescu,2012 The Doppler effect or Doppler shift named after Austrian physicist Christian Doppler who proposed it in 1842 in Prague is the change in frequency of a wave for an observer moving relative to the source of the wave It is commonly heard when a vehicle sounding a siren or horn approaches passes and recedes from an observer The received frequency is higher compared to the emitted frequency during the approach it is identical at the instant of passing by and it is lower during the recession The relative changes in frequency can be explained as follows When the source of the waves is moving toward the observer each successive wave crest is emitted from a position closer to the observer than the previous wave Therefore each wave takes slightly less time to reach the observer than the previous wave Therefore the time between the arrival of successive wave crests at the observer is reduced causing an increase in the frequency While they are travelling the distance between successive wave fronts is reduced so the waves bunch together Conversely if the source of waves is moving away from the observer each wave is emitted from a position farther from the observer than the previous wave so the arrival time between successive waves is increased reducing the frequency The distance between successive wave fronts is increased so the waves spread out For waves that propagate in a medium such as sound waves the velocity of the observer and of the source is relative to the medium in which the waves are transmitted The total Doppler Effect may therefore result from motion of the source motion of the observer or motion of the medium Each of these effects is analyzed separately For waves which do not require a medium such as light or gravity in general relativity only the relative difference in velocity between the observer and the source needs to be considered **The Micro-doppler Effect in Radar** Victor C. Chen,2011 The Doppler Effect can be thought of as the change in frequency of a wave for an observer moving relative to the source of the wave In radar it is used to measure the velocity of detected objects This highly practical resource provides thorough working knowledge of the micro Doppler effect in radar including its principles applications and implementation with MATLAB codes The book presents code for simulating radar backscattering

from targets with various motions generating micro Doppler signatures and analyzing the characteristics of targets In this title professionals will find detailed descriptions of the physics and mathematics of the Doppler and micro Doppler effect The book provides a wide range of clear examples including an oscillating pendulum a spinning and precession heavy top rotating rotor blades of a helicopter rotating wind turbine blades a person walking with swinging arms and legs a flying bird and movements of quadruped animals **The Doppler Effect** Thomas Perrott Gill,1965 **Laser Doppler Shift Velocimeter** F.
