

The Doppler Effect

Generalized Doppler Equation in 2-D: the observed frequency f is related to the emitted frequency of the source f_0 by the equation

$$f = \left(\frac{v + v_r}{v + v_s} \right) f_0$$

where v is the velocity of waves in the medium,
 v_r is the velocity of the source relative to the medium and
 v_s is the velocity of the receiver relative to the medium

In the case of a stationary observer (or microphone), the equation reduces to

$$f = \left(\frac{v}{v + v_s} \right) f_0$$

where v_s is positive if the source is moving away from the observer, and negative when moving towards the observer

These equations assume that the source is directly approaching or receding from the observer.
