According to FMCSA regulations, which of the following must the medical examiner evaluate when examining a driver's eyes?

- A. Pupil reactivity
- B. Iris symmetry
- C. Conjunctival injection
- D. Corneal thickness

✓✓✓: Correct Response:

- A. Pupil reactivity

Incorrect Responses:

- B. Iris symmetry

This is incorrect because determining iris symmetry is not required by FMCSA.

- C. Conjunctival injection

This is incorrect because most causes of conjunctival injection would not be disqualifying. Causes that are suspicious for a disqualifying condition need additional evaluation. While this abnormal finding should be explained, with determination of possible effects on safe driving before making a certification decision, it is not a condition that is specified in FMCSA regulations.

- D. Corneal thickness

This is incorrect because it is not measured in an office examination except by an eye specialist.
