

Common Onboard Computers (OBC)

48v 15 Amp Model Compatible with Onboard Computers (OBC)

When choosing between the 48v/17 Amp and 48v/15 Amp, you will need to know if your Club Car golf cart has an onboard computer (OBC).

An easy way to determine if your cart has an OBC is to lift your front seat and locate the black negative battery wire coming off the last battery in your battery pack (the only negative wire not going into another battery). If the negative wire is going into a small box, generally about 4" square your cart has an OBC and therefore you need the 48v 15 Amp charger. If the negative wire goes directly into the motor your cart does not have an OBC and you need the 48v 17 Amp charger.

Multi-Stage Smart Charging

Depending on the charge mode selected, there are up to 8 different charging stages. The most common stages used in all modes include:

- 
Pre-Qualification Test Stage
 Tests battery for sulfation by applying a low-level charge current and then analyzes voltage and current changes to determine if batteries are ready for bulk charging.
- 
Bulk 'Constant Current' Charge Stage
 High power charge stage, charges at constant current up to 80% of total charge capacity.
- 
Absorption 'Constant Voltage' Stage
 Charger charges at a constant voltage level to provide adequate time for the battery plates to absorb energy, this stage ends once 95% of total charge capacity is achieved.
- 
Top-Off 'Finish' Charge Stage
 Charger charges at either a constant voltage, constant current or a combination of both until 100% of total charge capacity is reached.
- 
Equalization Charge Stage
 As batteries in a battery pack charge and discharge over many cycles, cells may become unbalanced. This stage employs different combinations of voltage and current to equalize battery cells.
- 
Float/Maintenance Standby Charge Stage
 This stage is used when batteries are fully charged. During this stage the charger will continue to monitor
