Données Sur La Composition Des Aliments:

L'homme et ses aliments. Initiation à la science des aliments (2e édition) Gérard B.

Martin, 2001-08-16T00:00:00-04:00 Le domaine alimentaire comme tous les autres secteurs de l'activité humaine a connu un développement marqué durant la deuxième moitié du XXe siècle. Vu cette évolution de la science et de la technologie alimentaire il était important de concevoir un manuel visant à clarifier un certain nombre de principes généraux et montrer comment les produits alimentaires que nous consommons sont le fruit d'une technologie qui comporte de multiples facettes. Dans un style scientifique concis les auteurs définissent ce que sont les aliments leur composition chimique et les procédés utilisés pour les conserver et les transformer. Cet ouvrage présente une description des principes scientifiques la base des divers traitements que doivent subir les aliments avant d'arriver sur notre table. Les explications fondamentales et les exemples tirés de l'industrie s'adressent plus particulièrement aux étudiants de la fin du collégial ou du début de l'université. Pour ceux et celles qui envisagent une carrière dans le domaine alimentaire il s'agira d'un manuel d'initiation tandis que les autres y trouveront un moyen d'enrichir leurs connaissances.

Composition of Foods Bernice Künert Watt, Annabel Laura Merrill, 1963

Composition of Foods: Raw, Processed, Prepared Bernice Künert Watt, Annabel Laura Merrill, 1964
Composition of Foods Rena Cutrufelli, 1991
Tables de composition des aliments, 1971
Structure des aliments et effets

nutritionnels Fardet Anthony, Souchon Isabelle, Dupont Didier, 2013-09-27 Des avancées scientifiques récentes en nutrition et en sciences des aliments nous permettent de regarder autrement notre alimentation. L'aliment n'est plus considéré seulement comme la somme de ses constituants mais comme une structure physique complexe qui influence le devenir digestif des nutriments leurs effets métaboliques et in fine leurs effets sur la santé long terme. Par exemple composition strictement identique un pain et des pâtes alimentaires base de blé dur ont des effets nutritionnels très différents le premier tant un sucre rapide et le second un sucre lent avec les conséquences métaboliques importantes que l'on connaît au niveau notamment de la régulation de la glycémie. On pourrait ainsi multiplier les exemples. Cet ouvrage présente un état de l'art sur l'influence des caractéristiques physiques et physicochimiques de la matrice alimentaire sur son devenir digestif et métabolique. Les auteurs y analysent les effets sur la santé des nutriments en considérant la fois les macronutriments les micronutriments et les fibres. Il ne s'agit plus de envisager la nutrition selon une seule perspective quantitative mais aussi selon une perspective qualitative impliquant des notions d'interaction des nutriments dans la matrice de bioaccessibilité enzymatique et de biodisponibilité digestive. L'originalité de l'ouvrage est de suggérer de nouvelles perspectives de recherche en science des aliments via l'ingénierie reverse savoir partir des effets santé recherchés pour remonter la formulation et au procédé de transformation de l'aliment. L'interface de la science des aliments et de la nutrition humaine l'ouvrage s'adresse aux chercheurs et enseignants chercheurs aux étudiants et aux scientifiques de l'industrie agroalimentaire. Il pourra aussi intéresser le milieu médical comme les nutritionnistes les cliniciens et les diététiciens.

La Composition des aliments en principes nutritifs calorigènes et

le calcul de leur valeur énergétique utile... Organisation des Nations Unies pour l'alimentation et l'agriculture.
