Desorption Induced by Electronic Transitions, DIET III Richard H. Stulen, Michael L. Knotek, 2013-03-08 These proceedings are the result of the third international workshop on Desorption Induced by Electronic Transitions DIET III which took place on Shelter Island NY May 20 22 1987 The work contained in this volume is an excellent summary of the current status of the field and should be a valuable reference text for both seasoned researchers and newcomers in the field of DIET Based on the success of the meeting it seems clear that interest and enthusiasm in the field is strong It is also apparent from the many lively discussions during the meeting that many unanswered questions and controversies remain to be solved It was particularly pleasing to see many new participants from new and rapidly advancing fields ranging from gas phase dynamics to semiconductor processing The resulting cross fertilization from these separate but related fields is playing an important role in helping us understand desorption processes at solid surfaces In general the topics covered during the course of the workshop overlapped those of both DIET I and DIET II However clear advances have been made and in general there is a much more sophisticated understanding of the physics and chemistry of stimulated desorption Of particular note in this regard is the gas phase research highlighted in this workshop by the work of Nenner et al where new results indicate that in the gas phase photodissociation can precede or compete strongly with autoionization and other electronic relaxation pathways
