Genetic Counseling Walter Fuhrmann, Friedrich Vogel, 2012-12-06 viii From discussions with our colleagues we know that they recognize the problems and worry about them but simply do not have the time to thoroughly study the highly specialized genetic literature available This book is an attempt to fill this void We have made an effort to keep it as short and clear as possible and to limit it to the important and most frequent genetic abnormalities In particular we have tried to take into consideration the difficulties of the average student in understanding genetic logic and to eliminate the most common errors This guide is not designed to provide more than basic information No reader will arise from the study of this volume as an expert genetic counselor That requires in this as in all other sciences knowledge of the highly specialized literature as well as extensive experience Some geneticists therefore take the position that the general practitioner or specialist in any other field of medicine cannot possibly give proper genetic counsel to his patients Because he is not a genetics expert he should without exception refer all such cases to the geneticist This point of view would condemn this guide as potentially more harmful than helpful in that it might increase the cases of well meaning error as well as encouraging those who are not competent in this field to deal with problems which are beyond their capacity We obviously do not share this pessimistic standpoint

**Genetic Counseling** Walter Fuhrmann, Friedrich Vogel, 1969 An ounce of prevention is worth a pound of cure In medicine the truth of this statement is so self evident that it is simply taken for granted and yet it has become mere lip service for many a doctor since his work is almost exclusively concerned with the treatment of those who are already ill This applies not only to the treatment of patients but even more to that of entire families Many doctors are as yet unaware that the appearance of serious sometimes fatal diseases can be avoided by preventing the conception of sick human beings Our knowledge of genetics permits the relatively accurate prediction based on statistical probability of the recurrence of genetic defects anomalies and diseases within families Our patients are frequently aware that such predictions are possible In an effort to prevent the birth of defective children they try to inform themselves However in the practice of the individual doctor this sort of inquiry does not occur with such frequency that he is forced to concern himself systematically with these problems
