Early Numeracy Robert J Wright, James Martland, Ann K Stafford, 2006-01-05 Unlike many books based on research work this book doesn't just let teachers know what is going wrong with children's learning it actually gives some practical advice about what to do next The whole book is based upon extensive observation and recording of individual children and their difficulties with mathematics These children are the most difficult to plan for in a busy classroom and the authors appreciate the small steps and the different learning styles approaches needed for these children This approach fits well with the NNS wave and springboard materials but takes the analysis of the individual's difficulties to a more detailed level The book brings together research carried out across a range of countries and therefore shows the versatility of the approaches taken This will be a very useful book for trainee teachers as it exemplifies how to use assessment to feed into teaching It will be helpful for class teachers and mathematics coordinators as well as SENCOs to assist in improving the teaching and learning for specific children in our schools Mary Briggs Primary and Early Years PGCE Coordinator Institute of Education University of Warwick This is a highly practical resource that will be appreciated by classroom and specialist teachers alike It will provide teachers new to the Math Recovery program with practical help and support to diagnose errors and misconceptions in early numeracy Practicing Math Recovery Specialists will be thrilled with
