The Story of Gregor Mendel

Use the following words to fill in the following passage: parent, phenotype, recessive trait, Gregor Mendel, genotype, trait, gene, allele, dominant trait, and codominance.

Our story begins in a monastery in Austria in the 1800's. the father of genetics, conducted many experiments on his garden plants. He was particularly interested in studying pea plants because of their short growing time and many varieties. Mendel noticed that certain traits in pea plants were passed on from parents to offspring. He also noticed that sometimes a trait seemed to disappear in between generations. He wanted to find out why.

Gregor Mendel

After many experiments, in which he crossed plants with different traits, he noticed similar results. He noticed that sometimes trait showed up and other times they did not. For example, when he crossed a true-breeding purple-flowered plant with a true-breeding white-flowered plant, the first generation of plants were all purple. White flowers had disappeared! Mendel called the trait that always showed up the dominant trait. He called the trait that did not show up the recessive trait. When he allowed the plants of the first generation to self-pollinate, the next generation had 75% purple flowers and 25% white flowers.

He concluded that each plant had two sets of instructions for each trait, one from each parent. Today we know that genes, found on chromosomes, determine traits. Each gene has two or more different forms called alleles.

When studying genetics today, we can set up Punnett squares. The squares contain the possible allele combinations that might occur when crossing two pea plants. The inherited combination of alleles (PP, pp or Pp) is called the genotype. The organism's appearance, such as flower color is called the phenotype.

It was later discovered that in certain organisms neither trait was dominant and a mixing or blending of the dominant and recessive trait occurred. In this case, both traits are present. This is called codominance. In 1864, Mendel published his results, but unfortunately it wasn't until after he died that he was recognized for his work on genetics.
