Design of Enterprise Systems Ronald Giachetti, 2016-04-19 In practice many different people with backgrounds in many different disciplines contribute to the design of an enterprise Anyone who makes decisions to change the current enterprise to achieve some preferred structure is considered a designer What is problematic is how to use the knowledge of separate aspects of the enterprise to achieve a globally optimized enterprise The synthesis of knowledge from many disciplines to design an enterprise defines the field of enterprise engineering Because enterprise systems are exceedingly complex encompassing many independent domains of study students must first be taught how to think about enterprise systems Specifically written for advanced and intermediate courses and modules Design of Enterprise Systems Theory Architecture and Methods takes a system theoretical perspective of the enterprise It describes a systematic approach called the enterprise design method to design the enterprise The design method demonstrates the principles models methods and tools needed to design enterprise systems The author uses the enterprise system design methodology to organize the chapters to mimic the completion of an actual project Thus the book details the enterprise engineering process from initial conceptualization of an enterprise to its final design Pedagogical tools available include For instructors PowerPoint slides for each chapter Project case studies that can be assigned as long term projects to accompany the text Quiz questions for each chapter Business Process Analyzer software available for download For students Templates checklists forms and models to support enterprise engineering activities The book fills a need for greater design content in engineering curricula by describing how to design enterprise systems Inclusion of design is also critical for business students since they must realize the import their decisions may have on the long term design of the enterprises they work with The book s practical focus and project based approach coupled with the pedagogical tools gives students the knowledge and skills they need to lead enterprise engineering projects

Dilemma Web Based Booking and Counseling System James Karuga, 2012-08-20 Technical Report from the year 2008 in the subject Computer Science Software grade Merit London Metropolitan University course Computing Information Systems language English abstract This web based booking and counseling project was initially conceived for Dilemma Counseling Services as a

web system offering counseling to masses refer to project proposal The idea then was to have an online portal where clients can post problems and counselors respond to them However the core issue was whether it would be done for free at the expense of Dilemma Counseling time and finances But as the idea of the web based counseling system was brainstormed by top management new requirements arose To maximize potential of the web based system proposed the management realized their booking system was a mess and resulted in data duplication and clashing bookings The ineffectual booking system then in place brought constant complaints from clients whose counseling sessions clashed The Dilemma Staff contracted me to offer expertise on if counseling and booking can be incorporated into a web based system that is financially viable this was possible So I adopted a Unified Software Development Process USDP because after interviewing the various staff I was not satisfied with the feedback Thus I choose USDP as the software development method since it allows new requirements to be factored at any project stage Sure enough as the software development process progressed new requirements arose like online counseling system processing payments made and assigning username and passwords for clients who pay but prefer online counseling as opposed to face to face counseling The system allows staff to book clients remotely online via secure log in The clients counseled can have their progress tracked easily via the secure counseling chat system I stuck to the USDP process and working on each workflow and resultant artifacts like Unified Modeling Language diagrams to ensure the project was well modeled to be realized in construction and transition phases
