Data Structures using C Lab

For MCA 2nd Semester of VTU

Instructions to the Readers:

- This document is a useful material for the 2nd Semester MCA students (2013 Scheme – 13MCA26) of Visvesvaraya Technological University, Belagavi, Karnataka.
- Though these programs are compiled and verified on Turbo C compiler, they can be executed on different C compilers with little/no modifications.
- Additional explanation for the program is provided, wherever necessary. However, it is advised to know the theory concepts by referring to the respective subject notes (available in the website).
- Clarifications/suggestions are welcome!!

1. Convert a valid prefix expression into postfix expression.

Logic of the program:

- Read a valid prefix expression from the keyboard as a string variable.
- Reverse this string (use `strrev()` function)
- Read every character from the reversed prefix expression (say, *sym*)
- Store the single character *sym* into a string variable *temp* by attaching null character (`\0`) to it.
- If the *sym* is an operator (like +, - etc), pop two entries from the stack. Concatenate these two popped strings and also the *sym*. Push the concatenated string (*postfix*) (*op1+op2+sym*) into the stack.
- If the *sym* was not an operator (means, it will be an alphabet/digit) then push the *temp* into the stack.
- Repeat the above steps till the end of prefix expression (`strlen(prefix)`).
- You will get the required postfix expression in the variable *postfix*.

Note: Students are advised to give only valid prefix expression as an input to get the correct result. One can write an infix expression on a paper and convert it into prefix format manually and then it can be given as input to the program.

Data Structures and the Standard Template Library William Joseph Collins,2003 Data Structures and the Standard Template Library by William Collins teaches the fundamentals of Data Structures and their implementations It uses C as the language of instruction Most

of the data structures are provided in the Standard Template Library STL which students will be able to use in their further coursework and beyond To further students understanding of implementation issues alternative implementation other than the STL are also discussed Hands on learning is promoted throughout the text by the use of Programming Projects and labs Programming projects at the end of each chapter allow students to develop and implement their own data structures or to extend or apply data structures introduced in the chapter Additionally optional labs accompany the text and allow students to practice by giving them opportunities to code These labs can be used in many different ways such as in a closed lab in an open lab or for optional homework assignments

Data Structure Programming Joseph Bergin,2012-12-06 Once programmers have grasped the basics of object oriented programming and C the most important tool that they have at their disposal is the Standard Template Library STL This provides them with a library of re usable objects and standard data structures It has recently been accepted by the C Standards Committee This textbook is an introduction to data structures and the STL It provides a carefully integrated discussion of general data structures and their implementation and use in the STL In so doing the author is able to teach readers the important features of abstraction and how to develop applications using the STL

Data Structures Edward M. Reingold,Wilfred J. Hansen,1983 Data structures are central to computer science and in particular to programming In the analytic areas appropriate data structures have been the key to advances in the design of algorithms Once appropriate data structures are carefully defined all that remains is routine coding A comprehensive understanding of data structure techniques is essential in the design of algorithms and programs This text presents a carefully chosen fraction of available material but supplement it with a wide variety of exercises No single book can discuss all known data structures or algorithms This text presents the art of designing data structures preparing the student to devise special purpose structures for specific problems as they present themselves
