

CHAPTER 1

Introduction

Practice Exercises

- 1.1** This chapter has described several major advantages of a database system. What are two disadvantages?

Answer: Two disadvantages associated with database systems are listed below.

- a. Setup of the database system requires more knowledge, money, skills, and time.
- b. The complexity of the database may result in poor performance.

- 1.2** List five ways in which the type declaration system of a language such as Java or C++ differs from the data definition language used in a database.

Answer:

- a. Executing an action in the DDL results in the creation of an object in the database; in contrast, a programming language type declaration is simply an abstraction used in the program.
- b. Database DDLs allows consistency constraints to be specified, which programming language type systems generally do not allow. These include domain constraints and referential integrity constraints.
- c. Database DDLs support authorization, giving different access rights to different users. Programming language type systems do not provide such protection (at best, they protect attributes in a class from being accessed by methods in another class).
- d. Programming language type systems are usually much richer than the SQL type system. Most databases support only basic types such as different types of numbers and strings, although some databases do support some complex types such as arrays, and objects.
