

**1978-87 GM G-Body LS Swap Engine Mounting Brackets  
12643HKR  
Installation Instructions 199R10708**

Thank you for choosing to use Hooker Blackheart engine swap mounting brackets as part of your LS swap project. This mounting bracket kit is part of the most comprehensively engineered system of mounting components, headers and exhaust systems available for this application. The entire Hooker Blackheart swap system is designed to decrease your total swap installation effort and cost, while increasing the engineered quality of your vehicle and compatibility of these components with other popular aftermarket components. Please read these instructions thoroughly before attempting installation.

**PRE-INSTALLATION CONSIDERATIONS:**

Installation of these brackets requires the installation of new stock OE style damshell engine mounts as installed on all 1978-87 G-body vehicles equipped with Chevrolet small block V-8 engines (Anchor brand P/N 2252 stock rubber replacement damshell mounts, or Hooker/Holley 71221004HKR damshell mount cages and 712210014HKR / 71221015HKR poly inserts are recommended). Do not reuse old damshell mounts as part of this installation.

When used with the related Hooker Blackheart **12644HKR** transmission crossmember, this CAD designed engine swap mounting bracket kit will replicate the stock small block Chevy engine/transmission inclination angle in order to minimize the need to shim/adjust the rear pinion angle in stock to moderately lowered chassis applications.

Due to the unique design geometry of this engine swap mounting bracket kit, attempts to install it with headers and/or transmission crossmembers not developed by Hooker Blackheart engineering for this application will more than likely not be successful.

An engine hoist will be required to position the engine/trans into the vehicle in the proper orientation. Use of an adjustable-angle engine sling will greatly ease the hoisting/loading operation and negate the possible need to reposition the lifting chains mid-operation. An automotive lift or a jack and jack stands will be required to safely raise and support the vehicle.

If you plan to retain the functionality of the stock A/C system, it is highly recommended that you install the engine and transmission into the vehicle separately to minimize the chance of damaging the evaporator case on the firewall when positioning the engine in the chassis. Due to the extremely large production tolerances across all year models of these vehicles, clearance between the right side valve cover and the evaporator case can range from 1/2" to 0 distance between these components. Some installations will provide a surplus of coil/coil bracket clearance while others will be tight and require the rear coil to be relocated away from the evaporator case for clearance.

**CAUTION:** WORK ONLY ON A LEVEL SURFACE. USE JACKS /JACK STANDS OF SUFFICIENT CAPACITY TO LIFT AND SUPPORT YOUR VEHICLE. NEVER WORK UNDER A VEHICLE SUPPORTED BY A FLOOR OR BUMPER JACK.

**COMPATIBILITY INFORMATION:**

These engine swap mounting brackets were specifically designed for bolt-in compatibility with the Hooker Blackheart transmission swap crossmember, cast iron LS exhaust manifolds, headers and exhaust systems also designed/validated for this application. Various other OE and Holley® brand LS components have also been validated and/or designed for use with this system of components as follows:
