Tattar, Suresh Ramaiah, B. G. Manjunath, 2016-05-02 Integrates the theory and applications of statistics using R A Course in Statistics with R has been written to bridge the gap between theory and applications and explain how mathematical expressions are converted into R programs The book has been primarily designed as a useful companion for a Masters student during each semester of the course but will also help applied statisticians in revisiting the underpinnings of the subject With this dual goal in mind the book begins with R basics and quickly covers visualization and exploratory analysis Probability and statistical inference inclusive of classical nonparametric and Bayesian schools is developed with definitions motivations mathematical expression and R programs in a way which will help the reader to understand the mathematical development as well as R implementation Linear regression models experimental designs multivariate analysis and categorical data analysis are treated in a way which makes effective use of visualization techniques and the related statistical techniques underlying them through practical applications and hence helps the reader to achieve a clear understanding of the associated statistical models Key features Integrates R basics with statistical concepts Provides graphical presentations inclusive of mathematical expressions Aids understanding of limit theorems of probability with and without the simulation approach Presents detailed algorithmic development of statistical models from scratch Includes practical applications with over 50 data sets *Estimation and Inferential Statistics* Pradip Kumar Sahu, Santi Ranjan Pal, Ajit Kumar Das, 2015-11-03 This book focuses on the meaning of statistical inference and estimation Statistical inference is concerned with the problems of estimation of population parameters and testing hypotheses Primarily aimed at undergraduate and postgraduate students of statistics the book is also useful to professionals and researchers in statistical medical social and other disciplines It discusses current methodological techniques used in statistics and related interdisciplinary areas Every concept is supported

with relevant research examples to help readers to find the most suitable application. Statistical tools have been presented by using real life examples removing the fear factor usually associated with this complex subject. The book will help readers to discover diverse perspectives of statistical theory followed by relevant worked out examples.
