

The Origin of Species

by Charles Darwin

1809 - 1882

Darwin published his theory of evolution with compelling evidence in his 1859 book *On the Origin of Species*. By the 1930s, the scientific community and a majority of the educated public had accepted evolution as a fact. However, many Darwinian concepts, particularly concerning mechanisms which gave only a minor role to natural selection, and it was not until the resurgence of the modern synthesis in the 1930s that a return to the origin of a broad consensus developed in which natural selection was the basic mechanism of evolution. Darwin's original theory is the founding theory of the life sciences, explaining the diversity of life.
