**CCNA Datacenter Exam FOCUS Study Notes and Review Questions for 200-150 DCICN 2018 Edition** Exam REVIEW, 2017-12-18 The new DataCenter exam 200 150 DCICN covers the following subject areas 1 0 Data Center Physical Infrastructure 2 0 Basic Data Center Networking Concepts 3 0 Advanced Data Center Networking Concepts 4 0 Basic Data Center Storage 5 0 Advanced Data Center Storage Quite many topics include material similar to those of the R S track except that the NX OS are also covered since NX OS is being referred to as the data center OS The NX OS was originally derived from the MDS 9000 line of SAN switches It is said to be more powerful because it can support symmetric multiprocessors as well as multicore CPUs License activation however has to be made through chassis and feature specific license keys To conclude the Nexus switches provide newer line speed as well as virtualization capabilities at the expense of higher price tags To succeed in this CCNA Datacenter exam you need to read as many reference books as possible There is no single book that can cover everything The book is NOT intended to guide you through every single official topic You should therefore use this book together with other reference books for the best possible preparation outcome This book has information on both the regular IOS and the NX OS The two Oses look similar with some minor differences in the command syntaxes and usage For example NX OS does not have the login command for the switch users Also it does not really distinguish between the standard ACL and the extended ACL After all the exam topics of this Datacenter track do not really have anything special relative to the R S track other than implementing the technical features under NX OS
