Bitcoin Congressional Research Service,2015-01-28 Bitcoin first appeared in January 2009 the creation of a computer programmer using the pseudonym Satoshi Nakamoto His invention is an open source its controlling computer code is open to public view peer to peer transactions do not require a third party intermediary such as PayPal or Visa digital currency being electronic with no physical manifestation The Bitcoin system is private with no traditional financial institutions involved in transactions Unlike earlier digital currencies that had some central controlling person or entity the Bitcoin network is completely decentralized with all parts of transactions performed by the users of the system With a Bitcoin transaction there is no third party intermediary The buyer and seller interact directly peer to peer but their identities are encrypted and no personal information is transferred from one to the other However unlike a fully anonymous transaction there is a transaction record A full transaction record of every Bitcoin and every Bitcoin user s encrypted identity is maintained on the public ledger For this reason Bitcoin transactions are thought to be pseudonymous not anonymous Although the scale of Bitcoin use has increased substantially it still remains small in comparison to traditional electronic payments systems such as credit cards and the use of dollars as a circulating currency Congress is interested in Bitcoin because of concerns about its use in illegal money transfers concerns about its effect on the ability of the Federal Reserve to meet its objectives of stable prices maximum employment and financial stability and concerns about the protection of consumers and investors who might use Bitcoin Bitcoin offers users the advantages of lower transaction costs increased privacy and long term protection of loss of purchasing power from inflation However it also has a number of disadvantages that could hinder wider use These include sizable volatility of the price of Bitcoins uncertain security from theft and fraud and a long term deflationary bias that encourages the hoarding of Bitcoins In addition Bitcoin raises a number of legal and regulatory concerns including its potential for facilitating money laundering its treatment under federal securities law and its status in the regulation of foreign exchange trading **Bitcoin Basics: 101 Questions and Answers** Eric Sammons,2015-10-30 What is Bitcoin and

Regulating Blockchain Philipp

Hacker, Ioannis Lianos, Georgios Dimitropoulos, Stefan Eich, 2019-08-29 Less than a decade after the Financial Crisis we are witnessing the fast emergence of a new financial order driven by three different yet interconnected dynamics first the rapid application of technology such as big data machine learning and distributed computing to banking lending and investing in particular with the emergence of virtual currencies and digital finance second a disintermediation fuelled by the rise of peer to peer lending platforms and crowd investment which challenge the traditional banking model and may over time lead to a transformation of the way both retail and corporate customers bank and third a tendency of de-bureaucratization under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply These changes are to a significant degree driven by the development of blockchain technology The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges The book mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance as well as those that it will inevitably face and is partially already facing as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show as its domain of application expands in other fields of economic activity such as smart contracts and initial coin offerings The book provides an unparalleled critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation
