Awwa Manual Canadian Cross Connection Control Manual:

AWWA Canadian Cross-connection Control Manual, 2021 **Cross-connection Control Manual** Howard D. Hendrickson, United States. Environmental Protection Agency. Office of Drinking Water, 1989 *Drinking Water Distribution Systems* National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Public Water Supply Distribution Systems: Assessing and Reducing Risks, 2007-01-22

Protecting and maintaining water distributions systems is crucial to ensuring high quality drinking water. Distribution systems consisting of pipes, pumps, valves, storage tanks, reservoirs, meters, fittings, and other hydraulic appurtenances carry drinking water from a centralized treatment plant or well supplies to consumers' taps. Spanning almost 1 million miles in the United States, distribution systems represent the vast majority of physical infrastructure for water supplies and thus constitute the primary management challenge from both an operational and public health standpoint. Recent data on waterborne disease outbreaks suggest that distribution systems remain a source of contamination that has yet to be fully addressed. This report evaluates approaches for risk characterization and recent data and it identifies a variety of strategies that could be considered to reduce the risks posed by water quality deteriorating events in distribution systems. Particular attention is given to backflow events via cross connections, the potential for contamination of the distribution system during construction and repair activities, maintenance of storage facilities, and the role of premise plumbing in public health risk. The report also identifies advances in detection, monitoring, and modeling, analytical methods, and research and development opportunities that will enable the water supply industry to further reduce risks associated with drinking water distribution systems.

Recommended Practice for Backflow Prevention and Cross-connection Control American Water Works Association, 2004. This manual describes the causes and prevention of backflow and cross connections in potable water systems. Here is complete guidance for establishing a cross connection backflow prevention program for a water utility. You'll learn the water purveyor's legal responsibilities as well as the customer's responsibilities in backflow prevention. The manual covers risk assessment, types of programs to consider, and program administration. Until the cross connection control program is fully developed, the water purveyor is at maximum risk of potential liability. M14 also explains the hydraulics of backflow, the two types of backflow: backsiphonage and backpressure, and the conditions that can cause backflow and a potential cross connection such as a water main break.
