Higher National level It also aims to provide some of the more advanced knowledge required for those wishing to pursue careers in mechanical engineering, aeronautical engineering, electronics, communications engineering, systems engineering and all variants of control engineering. In Higher Engineering Mathematics 6th Edition the theory is introduced in each chapter by a full outline of essential definitions, formulae, laws, procedures etc. The theory is kept to a minimum for problem solving and is extensively used to establish and exemplify the theory. It is intended that readers will gain real understanding through seeing problems solved and then through solving similar problems themselves. Access to software packages such as Maple, Mathematica and Derive or a graphics calculator will enhance understanding of some of the topics in this text. Each topic considered in the text is presented in a way that assumes in the reader only knowledge attained in BTEC National Certificate Diploma or similar in an Engineering discipline. Higher Engineering Mathematics 6th Edition provides a follow up to Engineering Mathematics 6th Edition. This textbook contains some 900 worked problems followed by over 1760 further problems with answers arranged within 238 Exercises. Some 432 line diagrams further enhance understanding. A sample of worked solutions to over 1100 of the further problems has been prepared and can be accessed free via the Internet see next page. At intervals throughout the text are some 19 Revision Tests plus two more in the website chapters to check understanding. For example Revision Test 1 covers the material in Chapters 1 to 4. Revision Test 2 covers the material in Chapters 5 to 7. Revision Test 3 covers the material in Chapters 8 to 10 and so on. An Instructor's Manual containing full solutions to the Revision Tests is available free to lecturers adopting this text see next page. Due to restriction of extent five chapters that appeared in the fifth edition have been removed from the text and placed on the website. For chapters on Inequalities, Boolean algebra and logic circuits, Sampling and estimation theories, Significance testing and Chi square and distribution free tests see next page.
