you'll learn how to use the AVR microcontroller to make your own nifty projects and gadgets. You'll start off with the basics in part one: setting up your development environment and learning how the naked AVR differs from the Arduino. Then you'll gain experience by building a few simple gizmos and learning how everything can be interconnected. In part two we really get into the goodies: projects. Each project will show you exactly what software and hardware you need and will provide enough detail that you can adapt it to your own needs and parts availability. Some of the projects you'll make: An illuminated secret panel, A hallway lighting system with a waterfall effect, A crazy lightshow, Visual effects gizmos like a Moiré wheel and shadow puppets. In addition you'll design and implement some home automation projects including working with wired and wireless setups. Along the way you'll design a useable home automation protocol and look at a variety of hardware setups. Whether you're new to electronics or you just want to see what you can do with an AVR outside of an Arduino, *Practical AVR Microcontrollers* is the book for you.
