

The Circulatory System

The circulatory system is a really important part of our body. The word 'circulatory' means something that is going round and round in a circle or loop. This is exactly what is happening in our bodies all the time.

What Circulates and Why?

The simple answer is your blood is circulated all around your body. The blood is doing a really important job - it is taking nutrients, hormones and oxygen all around the body to all the places they need to go. The oxygen comes into your body when we breathe in and it goes into our lungs. Then, inside the lungs, this oxygen goes into our blood and starts its journey around the body. You could think of the blood cells a bit like delivery drivers that drop off the oxygen to where it needs to be. Oxygen is dropped off all around the body to thinner blood vessels, which transfer (move across) the oxygen to the cells in the body.

The Heart

The heart is at the heart of it all! Without the heart, no blood would get anywhere around your body. The heart is basically a big pump that constantly pumps the blood around the circulatory system. This has to happen all the time (even when you are asleep) to keep you alive. There are two loops in the circulatory system; the first goes to and from the heart visiting the lungs to collect oxygen and get rid of carbon dioxide. The other loop is much larger and goes to and from the heart, but travels all around the body in between.

Did You Know...?

- The average person's heart will beat 2.5 billion times during a lifetime.
- Amazingly, it takes under 20 seconds for one red blood cell to go round the whole body.
- Red blood cells last about 4 months before your body makes new ones.

seemingly unrelated issues as why duck breasts but not chicken breasts have dark meat and why dust accumulates on the blades of a fan But the real fascination of *Vital Circuits* lies neither in its practical advice nor in its trivia Rather it is in the detailed picture we construct piece by piece of our extraordinary circulatory system What's more the author communicates not just information but the excitement of discovering information In doing so he reveals himself to be an eloquent advocate for the cause of science as the most interesting of the humanities Anyone curious about the workings of the body whether afflicted with heart trouble or addicted to science watching will find this book a goldmine of information and oelight
