# Stoichiometry

## Section 11.1 What is stoichiometry?

In your textbook, read about stoichiometry and the balanced equation.

For each statement below, write *true* or *false*.

- \_\_\_\_\_ 1. The study of the quantitative relationships between the amounts of reactants used and the amounts of products formed by a chemical reaction is called stoichiometry.
- \_\_\_\_\_ 2. Stoichiometry is based on the law of conservation of mass.
- \_\_\_\_\_ 3. In any chemical reaction, the mass of the products is less than the mass of the reactants.
- \_\_\_\_\_ 4. The coefficients in a chemical equation represent not only the number of individual particles but also the number of moles of particles.
- \_\_\_\_\_ 5. The mass of each reactant and product is related to its coefficient in the balanced chemical equation for the reaction by its molar mass.

Complete the table below, using information represented in the chemical equation for the combustion of methanol, an alcohol.

Substance	Molar Mass (g/mol)	Number of Molecules	Number of Moles (mol)	Mass (g)
6. Methanol	32.05			
7. Oxygen gas	32.00			
8. Carbon dioxide	44.01			
9. Water	18.02			

10. What are the reactants? \_\_\_\_\_
11. What are the products? \_\_\_\_\_
12. What is the total mass of the reactants? \_\_\_\_\_
13. What is the total mass of the products? \_\_\_\_\_
14. How do the total masses of the reactants and products compare? \_\_\_\_\_

Plett, M. Scott Trimboli, 2024-01-31 This book the third and final volume in a series describing battery management systems shows you how to use physics based models of battery cells in a computationally efficient way for optimal battery pack management and control to maximize battery pack performance and extend life It covers the foundations of electrochemical model based battery management system while introducing and teaching the state of the art in physics based methods for battery management Building upon the content in volumes I and II the book helps you identify parameter values for physics based models of a commercial lithium ion battery cell without requiring cell teardown shows you how to estimate the internal electrochemical state of all cells in a battery pack in a computationally efficient way during operation using these physics based models demonstrates the use the models plus state estimates in a battery management system to optimize fast charge of battery packs to minimize charge time while also maximizing battery service life and takes you step by step through the use models to optimize the instantaneous power that can be demanded from the battery pack while also maximizing battery service life The book also demonstrates how to overcome the primary roadblocks to implementing physics based method for battery management the computational complexity roadblock the parameter identification roadblock and the control optimization roadblock It also uncovers the fundamental flaw in all present state of art methods and shows you why all BMS based on equivalent circuit models must be designed with over conservative assumptions This is a strong resource for battery engineers chemists researchers and educators who are interested in advanced battery management systems and strategies based on the best available understanding of how battery cells operate      *Properties of Aluminium Gallium Arsenide* Sadao Adachi, 1993 The alloy system AlGaAs GaAs is potentially of great importance for many high speed electronics and optoelectronic devices because the lattice parameter difference GaAs and AlGaAs is very small which promises an insignificant concentration of undesirable interface states Thanks to this prominent feature a number of interesting properties and phenomena such as high mobility low dimensional carrier gases resonant tunnelling and fractional quantum Hall effect have been found in the AlGaAs GaAs heterostructure system New devices such as modulation doped FETs heterojunction bipolar transistors resonant tunnelling transistors quantum well lasers and other photonic and quantum effect devices have also been developed recently using this material system These areas are recognized as not being the most interesting and active fields in semiconductor physics and
