### Section: Themes of Biology

Read the passage below. Notice that the sentences are numbered. Answer the questions that follow.

<sup>1</sup> All living things are able to pass on their characteristics (traits) to their offspring because the genes that determine their characteristics are passed on from parent to offspring each generation. <sup>2</sup> **Genes** are sets of inherited instructions for making proteins that are coded in a molecule called deoxyribonucleic acid (DNA). <sup>3</sup> The passing of traits from parents to offspring is called **heredity**. <sup>4</sup> Heredity is the reason children tend to resemble their parents. <sup>5</sup> Sometimes damage causes genes to change. <sup>6</sup> A change in the DNA of a gene is called a **mutation**. <sup>7</sup> Mutations in sex cells (eggs and sperm) are passed on to other generations. <sup>8</sup> Mutations in body cells are not, but they may disrupt the control of cell reproduction, producing cancer.

panel is carefully cross referenced to the discussion of key molecular biology tools and techniques which are presented in a dedicated chapter at the end of the book Beyond this Molecular Biology further enriches the learning experience with full colour custom drawn artwork end of chapter questions and summaries relevant suggested further readings grouped by topic and an extensive glossary of key terms Among the students being taught today are the molecular biologists of tomorrow these individuals will be in a position to ask fascinating questions about fields whose complexity and sophistication become more apparent with each year that passes Molecular Biology Principles of Genome Function is the perfect introduction to this challenging dynamic but ultimately fascinating discipline **Holt Biology: Meiosis and sexual reproduction** ,2003
