

Chapter 14

The Earth

The Earth is our home. All living beings live on it. The Earth is made up of land and water. About 70 percent of the Earth's surface is water and only 30 percent is land. The earth is surrounded by layer of air called the atmosphere.

The Planets

The earth and other planets are made up of the Solar system. There are eight planets in the solar system. They are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune.

Mercury is the smallest and Jupiter is the biggest planet.

Venus is the hottest planet in the Solar system.

Planets have no light of their own. They glow only when sunlight falls on them.

Remember: Earlier there were nine planets in the solar system. But Pluto has now been excluded from the family of planets.

The Earth

The Earth moves around the Sun. To us the Earth seems to be very big. But it is many times smaller than the sun. The sun is about 150 million kilometres away from the earth. That's why it looks small to us.

Creation: Myth or Miracle? Dr. Barry A. Bunting, 2019-03-11

The question this work addresses is this given our current state of knowledge are any of the major religion s creation accounts accurate or are they all myths and fables that don t hold up to close examination This work makes three assumptions Assumption no 1 If there is a creator and he provided a creation account then he should be able to get it right After all he was supposed to be there Assumption no 2 If there is a creator then one of the four major religions each of which has survived a thousand years or more is the most likely place to look for a legitimate creation account a message from our creator It is safe to say any creator capable of creating us and the universe we live in should be capable of accurately revealing his existence Assumption no 3 If we do find an ancient pre science creation account that makes a substantial number of scientific factually accurate statements not just a few lucky guesses but facts that were unknowable at the time the account was written then we can reasonably conclude there must be a creator who revealed these facts

The Oxford Handbook of International Environmental Law Lavanya Rajamani, Jacqueline Peel, 2021-08-06. The second edition of this leading reference work provides a comprehensive discussion of the dynamic and important field of international law concerned with environmental protection. It is edited by globally recognised international environmental law scholars Professor Lavanya Rajamani and Professor Jacqueline Peel and features 67 chapters authored by 76 renowned experts in their fields. The Handbook discusses the key principles underpinning international environmental law, its relevant actors and tools, and rules applying in its substantive sub fields such as climate law, oceans law, wildlife and biodiversity law, and hazardous substances regulation. It also explores the intersection of international environmental law with other areas of international law such as those concerned with trade, investment, disaster, migration, armed conflict, intellectual property, energy, and human rights. The Handbook sets its discussion of international environmental law in the broader interdisciplinary context of developments in science, ethics, politics, and economics, which inform the way in which environmental rules are made, implemented, and enforced. It provides an introduction to the foundations of international environmental law, while also engaging with questions at the frontiers of research, teaching, and practice in the field, including the role of Global South perspectives, the contribution made by Earth jurisprudence, and the growing role of a diverse range of actors from indigenous peoples to business and industry. Like the first edition, this second edition of the Handbook is an essential reference text for all engaged with environmental issues at the international level and the applicable governance and regulatory structures.

The contributions in this volume trace the history of ideas and the research of scholars in a wide range of geological disciplines that have paved the way to our present day understanding and knowledge of the physical nature of our planet and the diversity of life that inhabited it. To mark the 50th anniversary of the founding of the International Commission on the History of Geology (INHIGEO), the book features contributions that give insights into its establishment and progress. In other sections, authors reflect on the value of studying the history of the geosciences and provide accounts of early investigations in fields as diverse as tectonics, volcanology, geomorphology, vertebrate palaeontology, and petroleum geology.
