Why regulation of gene expression?

- Pulling it all together
 - Transcription starts at the transcription start site
 - Going to be given
 - Rna polymerase binds to the TSS
 - Reading 3' to 5'
 - Information is in the order of the bases
 - mRNA is made 5' end first
 - Translation starts at the start codon
 - Not usually right at the beginning of the 5' end
 - Becomes the 5' untranslated region
 - Start codon is where the ribosome binds
 - Stop codons dictate where translation stops
 - Doesn't have to be right at the end
 - 3' untranslated region
 - End with a polypeptide
 - Made of amino acids
 - Peptide bonds
 - N terminus made first
 - C terminus made last
- Regulation
 - Refers to the ability of cells to control their level of gene expression
 - Would be wasteful for all to be expressed all the time
 - Majority of genes regulated to ensure that gene products are produced at the correct time and in appropriate amount
 - Why?
 - Saves energy in the cell
 - By producing specific gene product only when needed
 - Not all genes are regulated
 - Constitutive genes have essentially constant levels of expression
 - Prokaryotes
 - Transcription and translation take place at the same time
 - Eukaryotes
 - Transcription first
 - Nucleus
 - Processing of the mRNA
 - Introns removed
 - Exons spliced together
 - Cap added on 5' end
 - Stability/ signal
 - Poly-a tail added on 3' end
 - Stability/ signal
 - Translation
 - Finished proteins
 - Pathway regulation
 - Feedback inhibition
 - Allosteric inhibition
 - Ex: negative regulation
 - When tryptophan accumulates it will turn off the pathway
 - Acts as the inhibitor
 - Regulation of gene expression
 - Doesn't produce the enzyme
 - Far more effective
 - Doesn't need to transcribe/ processed/ translated
 - Eukaryotes
 - Cell differentiation
 - Dependent on fine-tuning of gene expression

The Biology of Epithelial Cell Populations Nicholas A. Wright, Malcolm Alison, 1984 This book brings together in a critical study current research on epithelial cell populations It sets out to analyse the principles by which epithelial cell populations are organized in terms of the function of their component populations The approach is both descriptive and operational giving special emphasis to epithelial cell lineages three dimensional organization methodology for measuring epithelial cell population sizes and proliferative rates epithelial stem cell populations growth reactions response to cytotoxic insult carcinogenesis and epithelial growth control The book is directed primarily at those who are interested in the organization of proliferating and differentiating tissue systems in terms of their contained cell lineages There are many lessons in epithelia for those studying growth control since they are in many situations ideal models upon which to test general ideas and concepts The authors also indicate the most important new research areas and provide advice on the practical approach to problems in epithelial cell proliferation and its control *SAT II Biology For Dummies* Scott A.
