Leondes, 1999 Applications of fuzzy theory often referred to as fuzzy logic are maturing and multiplying at a phenomenal rate and a comprehensive treatment of these real world techniques and applications is now very timely Unlike traditional computer logic involving clear true or false decisions a fuzzy logic system chooses what is most true after considering several contributing and possibly conflicting variables Examples of practical devices using fuzzy computer decision making are thermostats that respond to a combination of temperature and humidity comfort factors an elevator that considers how crowded a car is rather than just its proximity to the desired floor and a

camera that integrates the variables affecting picture quality These volumes will present a logical progression from implementation and modeling techniques to industrial commercial applications to fuzzy neural and adaptive fuzzy systems
