Michele Holbrook, Jean Heitz, 2019-02-05 BIOLOGY HOW LIFE WORKS has been a revolutionary force for both instructors and students in the majors biology course It was the first truly comprehensive set of integrated tools for introductory biology seamlessly incorporating powerful text media and assessment to create the best pedagogical experience for students THE VISUAL PROGRAM The already impressive visual program has been greatly improved and expanded The powerful Visual Synthesis tools have been reimagined allowing for more flexibility for both students and instructors A new Tour Mode allows for learning objective

driven tours of the material and deep linking from the eText allow the student to jump straight from the text into a rich visual representation of the content. Instructors can also create customized tours to use for engaging in class presentations. And finally, new animations have been added to the library, including a new 3D animation to support the animal physiology content.

A FOCUS ON SCIENTIFIC SKILLS The third edition does even more to teach students the skills they need to think like a scientist, along with the content they need to move beyond the introductory course. New Skills Primers are self-paced tutorials that guide students to learn practice and use skills like data visualization, experimental design, working with numbers, and more. New How Do We Know activities accompany the feature in the text and teach students to understand scientific inquiry.

THE HUB The best teaching resources in the world aren't of use if instructors can't find them. The HUB provides a one-stop destination for valuable teaching and learning resources, including all of our well-vetted in-class activities.

IMPROVED ORGANIZATION OF TOPICS We implemented several organizational changes based on extensive user feedback with the goal of creating an improved narrative for students and a more flexible teaching framework for instructors. A new chapter on Animal Form, Function, and Evolutionary History leads off the animal anatomy and physiology chapters to provide a whole-body view of structure and function and to provide better context for the more specific systems in following chapters. The ecology coverage has been enriched and reorganized for a more seamless flow. A new chapter on Ecosystem Ecology combines ecosystem concepts formerly housed in separate chapters to present a more cohesive view of the flow of matter and energy in ecosystems. All of these changes and improvements represent the next step in the life of Biology.

How Life Works We think we have created the best learning resource for introductory biology students, and we think instructors will find joy in the improvements they can make in their classes with these materials.

Pheromone Communication in Moths Jeremy D. Allison, Ring T. CardŽ, 2016-10-25 Common among moths is a mate finding system in which females emit a pheromone that induces males to fly upwind along the pheromone plume Since the chemical pheromone of the domesticated silk moth was identified in 1959 a steady increase in the number of moth species whose pheromone attractants have been identified now results in a rich base for review and synthesis Pheromone Communication in Moths summarizes moth pheromone biology covering the chemical structures used by the various lineages signal production and perception the genetic control of moth pheromone traits interactions of pheromones with host plant volatiles pheromone dispersal and orientation male pheromones and courtship and the evolutionary forces that have likely shaped pheromone signals and their role in sexual selection Also included are chapters on practical applications in the control and monitoring of pest species as well as case studies that address pheromone systems in a number of species and groups of closely allied species Pheromone Communication in Moths is an invaluable resource for entomologists chemical ecologists pest management scientists and professionals who study pheromone communication and pest management

Variation of Leptin-Melanocortin Signaling Pathway Genes and their Genetic Effects on Body Weight, Linear Body Measurements and Fatness Traits in Sheep Shishay Girmay Endallew, 2023-08-23 Doctoral Thesis Dissertation from the year 2019 in the subject Biology Genetics Gene Technology grade Very good language English abstract This thesis focuses on examining the genetic effects of leptin melanocortin signaling pathway genes specifically MC4R STAT3 and LEP on body

measurement and fatness traits in sheep The study recognizes that an animal's phenotype performance for a specific trait is influenced by both its genetic merit and the environmental factors it experiences To improve genetic traits in sheep it is crucial to define the genetic component associated with the trait of interest The research identifies major genes within the leptin melanocortin signaling pathway that significantly impact growth and lean meat production The study utilizes various techniques such as bioinformatics tools Polymerase Chain Reaction PCR direct sequencing General Linear Models GLM immunohistochemistry IHC and promoter region analysis to investigate the variations structure function and expression of these genes in different tissues of sheep While studies have begun to gain insight into chromosomal locations that regulate economically valuable traits in sheep much unearthing works remained to be done regarding the generation of practical genomics information that can be applied to genetic improvement of reproduction disease resistance production and carcass quality traits in sheep Although preceding researchers have reported SNPs in the major genes of the leptin melanocortin signaling pathway including the MC4R and LEP has reported an association with various economically important traits in sheep The effect of the STAT3 genotypes on body weight and fatness in sheep is not determined Moreover the association of variants in the promoter region of the MC4R gene with the economically important traits and the promoter region of the gene was not delineated So this study was crucial to enlighten these research gaps

both fundamental and advanced information and critical commentaries useful for those in all fields of plant science research
Provides details of molecular and genetic aspects of NUE in crop plants and model plant systems Presents information on major macronutrients nutrient sensing and signaling and the molecular and genomic issues associated with primary and secondary macronutrients Delivers information on how molecular genetic information associated with NUE can be used to develop plant breeding programs Includes contributions from world leading plant nutrition research groups
