Mathematical Modelling Simon Serovajsky, 2021-11-23 Mathematical Modelling sets out the general principles of mathematical modelling as a means comprehending the world Within the book the problems of physics engineering chemistry biology medicine economics ecology sociology psychology political science etc are all considered through this uniform lens The author describes different classes of models including lumped and distributed parameter systems deterministic and stochastic models continuous and discrete models static and dynamical systems and more From a mathematical point of view the considered models can be understood as equations and systems of equations of different nature and variational principles In addition to this mathematical features of mathematical models applied control and optimization problems based on mathematical models and identification of mathematical models are also presented Features Each chapter includes four levels a lecture main chapter material an appendix additional information notes explanations technical calculations literature review and tasks for independent work this is suitable for undergraduates and graduate students and does not require the reader to take any prerequisite course but may be useful for researchers as well Described mathematical models are grouped both by areas of application and by the types of obtained mathematical problems which contributes to both the breadth of coverage of the material and the depth of its understanding Can be used as the main textbook on a mathematical modelling course and is also recommended for special courses on mathematical models for physics chemistry biology economics etc *Physics* M.
