

## Yellow composites – things that look a bit like a dandelion

### HAWK'S-BEARDS, SOW-THISTLES, CAT'S-EARS AND OXTONGUES

Most botanists are reasonably confident that they can identify a dandelion – even if they don't appreciate just how many species of dandelions there are. However, for many of us this confidence can be shattered when we look in a wildflower guide and discover that there are lots of other yellow-flowered things that look a bit like a dandelion. These lookalikes can be challenging to identify. They include members of several closely related groups, many of them common, some of them less so. This is an informally defined group of species, but here you will find all the yellow composites with flowerheads similar in form and size to dandelions.

### WHY IS THIS GROUP OF PLANTS COMPLEX?

The good news is that not all these yellow-flowered Dandelion-like things are complex or difficult to identify. So, with a few tips you are likely to make rapid progress.

Perhaps what makes these plants daunting is the fact that they are all very similar shades of yellow. Plants with pink, purple and mauve flowers all seem to be different shades. In contrast, to human eyes, yellow-flowered species can all appear remarkably similar. This may be a function of the stability of the biochemistry of yellow pigments, or of our eyes' inability to detect colour variation in this part of the spectrum.

Part of the frustration in identifying these species is simply the number of possible alternatives you need to compare, and their unhelpful common names which seem obsessed with hawks. All these dandelion lookalikes are members of the daisy family, the Asteraceae, which includes about 24,000 species – more than any other plant family on earth. This problem of expansiveness is often overlooked by taxonomists, but it is not trivial.

Finally, one of the groups of Dandelion-like plants, the hawkweeds (*Hieracium* spp.), are genuinely complex. Like the dandelions themselves, the hawkweeds produce seeds asexually. This form of reproduction is always associated with the taxonomic complexity that delights some botanists and confounds others. Many
