

Chapter 18 – Sampling Distribution Models

1. Coin tosses.

- a) The histogram of these proportions is expected to be symmetric, but **not** because of the Central Limit Theorem. The sample of 16 coin flips is not large. The distribution of these proportions is expected to be symmetric because the probability that the coin lands heads is the same as the probability that the coin lands tails.
- b) The histogram is expected to have its center at 0.5, the probability that the coin lands heads.
- c) The standard deviation of data displayed in this histogram should be approximately equal to the standard deviation of the sampling distribution model, $\sqrt{\frac{pq}{n}} = \sqrt{\frac{(0.5)(0.5)}{16}} = 0.125$.
- d) The expected number of heads, $np = 16(0.5) = 8$, which is less than 10. The Success/Failure condition is not met. The Normal model is not appropriate in this case.

2. M&M's.

- a) The histogram of the proportions of green candies in the bags would probably be skewed slightly to the right, for the simple reason that the proportion of green M&M's could never fall below 0 on the left, but has the potential to be higher on the right.
- b) The Normal model cannot be used to approximate the histogram, since the expected number of green M&M's is $np = 50(0.10) = 5$, which is less than 10. The Success/Failure condition is not met.
- c) The histogram should be centered around the expected proportion of green M&M's, at about 0.10.
- d) The proportion should have standard deviation $\sqrt{\frac{pq}{n}} = \sqrt{\frac{(0.1)(0.9)}{50}} = 0.042$.

3. More coins.

- a) $\mu_{\hat{p}} = p = 0.5$ and $\sigma(\hat{p}) = \sqrt{\frac{pq}{n}} = \sqrt{\frac{(0.5)(0.5)}{25}} = 0.1$

About 68% of the sample proportions are expected to be between 0.4 and 0.6, about 95% are expected to be between 0.3 and 0.7, and about 99.7% are expected to be between 0.2 and 0.8.

Revised Student Solutions Manual Mark L. Berenson, 2002 **Small Sample Size Solutions** Rens van de Schoot, Milica Miočević, 2020-02-13 Researchers often have difficulties collecting enough data to test their hypotheses either because target groups are small or hard to access or because data collection entails prohibitive costs Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research Each chapter illustrates statistical methods that allow researchers to apply the optimal statistical model for their research question when the sample is too small This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations and solutions include both classical and Bayesian methods All proposed solutions are described in steps researchers can implement with their own data and are accompanied with annotated syntax in R The methods described in this book will be useful for researchers across the social and behavioral sciences ranging from medical sciences and epidemiology to psychology marketing and economics Differential Geometrical Theory of Statistics Frédéric Barbaresco, Frank Nielsen, 2018-04-06 This book is a printed edition of the Special Issue Differential Geometrical Theory of Statistics that was published in Entropy **Quality by Experimental Design** Thomas B.
