Feminist Posthumanisms, New Materialisms and Education Jessica Ringrose,Katie Warfield,Shiva Zarabadi,2020-04-28 This edited collection is a careful assemblage of papers that have contributed to the maturing field

within education studies that works with the feminist implications of the theories and methodologies of posthumanism and new materialism what we have also called elsewhere PhEmaterialism The generative questions for this collection are what if we locate education in doing and becoming rather than being And how does associating education with matter multiplicity and relationality change how we think about agency ontology and epistemology This collection foregrounds cutting edge educational research that works to trouble the binaries between theory and methodology It demonstrates new forms of feminist ethics and response ability in research practices and offers some coherence to this new area of research This volume will provide a vital reference text for educational researchers and scholars interested in this burgeoning area of theoretically informed methodology and methodologically informed theory The chapters in this book were originally published as articles in Taylor Francis journals

Arithmetic Counts! Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math

America's children are being held back in math because of how arithmetic is drug out in elementary school. Virtually every textbook-based elementary school math program in use today is mind-numbing in its repetitiveness from grade to grade. The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized. Research shows that the human brain is not designed to remember things learned by rote when no longer practiced. That's acknowledged in the use of the aphorism that states the obvious that we remember what we use and forget what we don't. You know that to be true if you've ever forgotten things you once knew as well as your own name, things like an old address or a license plate number. Every child can understand base ten numeration when taught hands-on with arithmetic blocks. Thereby every child can understand base ten arithmetic. And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget, one never has to guess and risk ridicule and bad grades if they guess wrong. What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget.

,1997 **5th Grade Math Workbook** Ace Academic Publishing,2018-07-15 The contents of this Math workbook include multiple chapters and units covering all the required Common Core Standards for this grade level. Similar to a standardized exam, you can find questions of all types including multiple choice, fill in the blank, true or false, match the correct answer, and free response questions. These carefully written questions aim to help students reason abstractly and quantitatively using various models, strategies, and problem-solving techniques. The detailed answer explanations in the back of the book help the students understand the topics and gain confidence in solving similar problems.

Math Workbook 2nd Grade Genius Turtle,2018-03-02 Math Workbook 2nd grade Summer Packet This math packet covers almost every second grade Common Core State Standards. I believe 5 standards were not included. Each page has a student-friendly objective and the standard domain listed. The packet would be a good idea for 2nd graders who do not want to lose math principles over the summer, 1st graders entering 2nd grade who want a head start, or 3rd graders who need review. The summer packet is fun and includes mystery picture activities. The packet covers 2.OA.1 Addition and Subtraction with word problems, 2.OA.2 Addition and Subtraction facts, 2.OA.3 Grouping objects, 2.OA.4 Repeated Addition as Multiplication, 2.NBT.1 Fluently adding and subtracting within 100, 2.NBT.2 Counting to 1000 by 1, 5, 10, 100, 2.NBT.3 Reading and writing numbers to 1000 in different ways, 2.NBT.4 Comparing 3-digit numbers, 2.NBT.6 Add more than 2 big numbers, 2.NBT.7 Adding and Subtracting with regrouping, 2.NBT.8 Adding and Subtracting 10s and 100s mentally, 2.MD.1 Using different tools to measure objects, 2.MD.3 Estimating the length of objects, 2.MD.5 Using addition and subtraction in word problems, 2.MD.6 Creating and using a number line, 2.MD.7 Telling time to five minutes, 2.MD.8 Counting money, 2.MD.10 Making a bar graph, 2.G.1 Naming shapes. Helpful reviews from teacher and parents. I was looking for a packet that I could just print and send with my kids. This has just the right amount of work and it has great problems for first graders to practice second grade skills. Used this for review the first few weeks of third grade. Will continue to use for students still needing help in these skills. Thank you.
