**Journal of VLSI Signal Processing Systems for Signal, Image, and Video Technology** ,1996      **Optimal Design of Distributed Control and Embedded Systems** Arben Çela,Mongi Ben Gaid,Xu-Guang Li,Silviu-Iulian

Niculescu,2013-11-29 Optimal Design of Distributed Control and Embedded Systems focuses on the design of special control and scheduling algorithms based on system structural properties as well as on analysis of the influence of induced time delay on systems performances It treats the optimal design of distributed and embedded control systems DCESs with respect to communication and calculation resource constraints quantization aspects and potential time delays induced by the associated communication and calculation model Particular emphasis is put on optimal control signal scheduling based on the system state In order to render this complex optimization problem feasible in real time a time decomposition is based on periodicity induced by the static scheduling is operated The authors present a co design approach which subsumes the synthesis of the optimal control laws and the generation of an optimal schedule of control signals on real time networks as well as the execution of control tasks on a single processor The authors also operate a control structure modification or a control switching based on a thorough analysis of the influence of the induced time delay system influence on stability and system performance in order to optimize DCES performance in case of calculation and communication resource limitations Although the richness and variety of classes of DCES preclude a completely comprehensive treatment or a single best method of approaching them all this co design approach has the best chance of rendering this problem feasible and finding the optimal or some sub optimal solution The text is rounded out with references to such applications as car suspension and unmanned vehicles Optimal Design of Distributed Control and Embedded Systems will be of most interest to academic researchers working on the mathematical theory of DCES but the wide range of environments in which they are used also promotes the relevance of the text for control practitioners working in the avionics automotive energy production space exploration and many other industries      Continuing Engineering Education for a Sustainable Future Patricia Caratozzolo,Angeles

Dominguez,Bente Nørgaard,Guillermo M. Chans,2025-08-06 The World Economic Forum stated in its 2023 Future of Jobs report that 44% of workers skills will change in the next five years Additionally six out of ten workers will require training before 2027 and only half will have adequate training opportunities With this in mind the three most pressing challenges currently facing the Continuing Engineering Education CEE community include 1 The shifting skill requirements dictated by the job market Engineering roles in various sectors are evolving demanding a mix of Knowledge Skills and Abilities KSA that is difficult to predict with certainty In addition the pace of Digital Transformation will highly influence these requirements 2 The climate change mitigation and adaptation Engineers must reskill and adapt to changing sustainability requirements and educational programs must support this transition 3 The underrepresentation of minorities Women racial and ethnic minorities and individuals with disabilities face disparities in opportunities mentorship and inclusion      **Mergent**
