Comparative Analysis of Deterministic and Nondeterministic Decision Trees Mikhail Moshkov,2020-03-14 This book compares four parameters of problems in arbitrary information systems complexity of problem representation and complexity of deterministic nondeterministic and strongly nondeterministic decision trees for problem solving Deterministic decision trees are widely used as classifiers as a means of knowledge representation and as algorithms Nondeterministic strongly nondeterministic decision trees can be interpreted as systems of true decision rules that cover all objects objects from one decision class This book develops tools for the study of decision trees including bounds on complexity and algorithms for construction of decision trees for decision tables with many valued decisions It considers two approaches to the investigation of decision trees for problems in information systems local when decision trees can use only attributes from the problem representation and global when decision trees can use arbitrary attributes from the information system For both approaches it describes all possible types of relationships among the four parameters considered and discusses the algorithmic problems related to decision tree optimization The results presented are useful for researchers who apply decision trees and rules to algorithm design and to data analysis especially those working in rough set theory test theory and logical analysis of data This book can also be used as the basis for graduate courses   **Decision Trees Versus Systems of Decision Rules** Kerven Durdymyradov,Mikhail Moshkov,Azimkhon Ostonov,2024-12-23 This book explores within the framework of rough set theory the complexity of decision trees and decision rule systems and the relationships between them for problems over information systems for decision tables from closed classes and for problems involving formal languages Decision trees and systems of decision rules are widely used as means of representing knowledge as classifiers that predict decisions for new objects as well as algorithms for solving various problems of fault diagnosis combinatorial optimization etc Decision trees and systems of decision rules are among the most interpretable models of knowledge representation and classification Investigating the relationships between these two models is an important task in computer science The

possibilities of transforming decision rule systems into decision trees are being studied in detail The results are useful for researchers using decision trees and decision rule systems in data analysis especially in rough set theory logical analysis of data and test theory This book is also used to create courses for graduate students   *Decision Trees for Decision Making* Magee,1964-01-01   *Decision Trees with Hypotheses* Mohammad Azad,Igor Chikalov,Shahid Hussain,Mikhail Moshkov,Beata Zielosko,2022-11-18 In this book the concept of a hypothesis about the values of all attributes is added to the standard decision tree model considered in particular in test theory and rough set theory This extension allows us to use the analog of equivalence queries from exact learning and explore decision trees that are based on various combinations of attributes hypotheses and proper hypotheses analog of proper equivalence queries The two main goals of this book are i to provide tools for the experimental and theoretical study of decision trees with hypotheses and ii to compare these decision trees with conventional decision trees that use only queries each based on a single attribute Both experimental and theoretical results show that decision trees with hypotheses can have less complexity than conventional decision trees These results open up some prospects for using decision trees with hypotheses as a means of knowledge representation and algorithms for computing Boolean functions The obtained theoretical results and tools for studying decision trees with hypotheses are useful for researchers using decision trees and rules in data analysis This book can also be used as the basis for graduate courses   **Average Time Complexity of Decision Trees** Igor Chikalov,2011-08-04 Decision tree is a widely used form of representing algorithms and knowledge Compact data models and fast algorithms require optimization of tree complexity This book is a research monograph on average time complexity of decision trees It generalizes several known results and considers a number of new problems The book contains exact and approximate algorithms for decision tree optimization and bounds on minimum average time complexity of decision trees Methods of combinatorics probability theory and complexity theory are used in the proofs as well as concepts from various branches of discrete mathematics and computer science The considered applications include the study of average depth of decision trees for Boolean functions from closed classes the comparison of results of the performance of greedy heuristics for average depth minimization with optimal decision trees constructed by dynamic programming algorithm and optimization of decision trees for the corner point recognition problem from computer vision The book can be interesting for researchers working on time complexity of algorithms and specialists in test theory rough set theory logical analysis of data and machine learning   Decision-Making Management Alberto Pliego Marugan,Fausto Pedro Garcia Marquez,2017-07-20 Decision Making Management A Tutorial and Applications provides practical guidance for researchers seeking to optimizing business critical decisions employing Logical Decision Trees thus saving time and money The book focuses on decision making and resource allocation across and between the manufacturing product design and logistical functions It demonstrates key results for each sector with diverse real world case studies drawn primarily from EU projects Theory is accompanied by relevant analysis techniques with a

progressional approach building from simple theory to complex and dynamic decisions with multiple data points including big data and lot of data Binary Decision Diagrams are presented as the operating approach for evaluating large Logical Decision Trees helping readers identify Boolean equations for quantitative analysis of multifaceted problem sets Computational techniques dynamic analysis probabilistic methods and mathematical optimization techniques are expertly blended to support analysis of multi criteria decision making problems with defined constraints and requirements The final objective is to optimize dynamic decisions with original approaches employing useful tools including Big Data analysis Extensive annexes provide useful supplementary information for readers to follow methods contained in the book Explores the use of logical decision trees to solve business problems Uses mathematical optimization techniques to resolve big data or other multi criteria problems Provides annexes showcasing application in manufacturing product design and logistics Shows case examples in telecommunications renewable energy and aerospace Supplies introduction by Benjamin Lev Editor in Chief of Omega the highest ranked journal in management science JCR **Decision Analysis with Supertree** Peter MacNamee,Peter McNamee,John Celona,1990 *Decision Analysis* Rex V.
