

## Chapter 7 - Decoding Chemical Formulas

As you briefly mentioned in a previous lesson, the chemical composition of a given compound or material is represented by a chemical formula.

- The formula indicates the constituent elements and the number of atoms of each element written as a subscript. This is the "atomic per formula unit", or apfu.
- For example, gold uses the number 19, oxygen uses 16, and silicon uses 28.
- Each element abbreviation starts with a capital letter, and if a second letter is present it will always be lowercase.
- Thus, silicon is represented by the letter Si. Together with an apfu, a chemical formula with no spaces and no subscript refers to a material system which is neutral and stable.

Consequently, its formula is simply "Si" and this one silicon atom per formula unit.

Quartz (page 206) has a simple formula as well, " $\text{SiO}_2$ ", consisting of 1 silicon atom and 2 oxygen atoms per formula unit.

Pyrite (also known as Fool's Gold, page 137) has the formula " $\text{FeS}_2$ ", consisting of 1 atom of iron and 2 atoms of sulfur per formula unit.

Sometimes with an example, but you could bracket it in the basic formula, as in the given which belongs to the other "group of examples" (page 206), " $2\text{FeSi}_2\text{O}_7$ ".

In that case there is 2 Fe, 4 Si, and 14 of the big one (the pyrite). This is called a unit formula (page 10) and therefore, that other big one could range up to 2 atoms per formula unit.

The Phases and Minerals of Charge Neutrality

All compounds, including all minerals, must be charge neutral.

This means that every positive charge must be balanced by a negative charge. Recall that cations have a positive charge and anions have a negative charge.

Identifying charge neutrality

1. Quartz,  $\text{SiO}_2$ , is composed of a Si cation which has a valence of +4 and two O anions, each of -2 charge.
2. Pyrite,  $\text{FeS}_2$ , is composed of one Fe (+2) cation, and two (-2) anions, and that 4(+2) equals.

This concept of charge neutrality is important for understanding mineral substitution of iron and other elements for a given mineral, and will be discussed later in the Lecture.
