The Dragon's Human Lily Winter, 2019-09-26 It's not unusual for Kai's best friend and business partner to be a little hard to track down. Wolf shifters don't always check email. But for Noah to drop off the grid for days? Something's wrong. Noah's trail dead ends hard against Kai's worst fear: a lab, a place of nightmares for creatures like him. As he prepares to walk in, he hopes like hell he'll walk out again. With Noah preferably alive. Lucy is thrilled with her dream job: head scientist at a private lab with her pick of plum projects. But lately she suspects she's surrounded by secrets. Sketchy meetings, people who arrive but don't leave, even hidden passageways. One peek behind a forbidden door, and too late she remembers why she shouldn't snoop. Kai was ready for anything, but he never expected to meet the desperate eyes of the one thing he never thought he'd find: his mate. Worse, she's not the only complication. There's a lab full of them. And a secret that could threaten the freedom, even the lives of every more-than-human on the planet. **Digital Curricula in School Mathematics** Meg Bates, Zalman Usiskin, 2016-02-01

The mathematics curriculum: what mathematics is taught to whom, it is taught, and when it is taught is the bedrock to understanding what mathematics students can, could, and should learn. Today's digital technology influences the mathematics curriculum in two quite different ways. One influence is on the delivery of mathematics through hardware such as desktops, laptops, and tablets. Another influence is on the doing of mathematics using software available on this hardware but also available on the internet: calculators or smart phones. These developments, rapidly increasing in their availability and decreasing in their cost, raise fundamental questions regarding a mathematics curriculum that has traditionally been focused on paper and pencil work and taught in many places as a set of rules to be practiced and learned. This volume presents the talks given at a conference held in 2014 at the University of Chicago, sponsored by the Center for the Study of Mathematics Curriculum. The speakers, experts from around the world and inside the USA, were asked to discuss one or more of the following topics: changes in the nature and creation of curricular materials; available to students; transformations in how students learn and how they demonstrate their learning; rethinking the role of the teacher and how students and teachers interact within a classroom and across distances from each other. The result is a set of articles that are interesting and captivating and challenge us to examine how the learning of mathematics can and should be affected by today's technology.
