

Capacitors

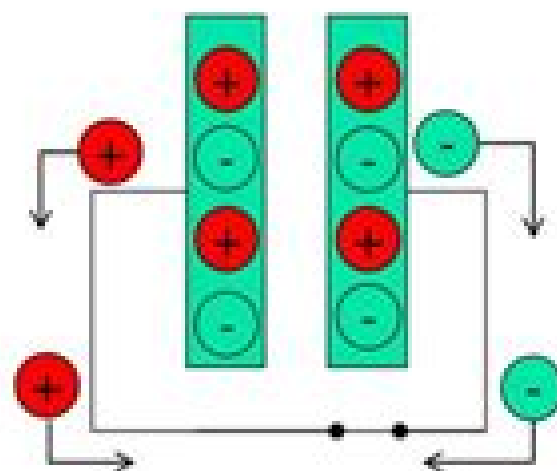

- A capacitor is a passive two-terminal electrical device used to store energy electrostatically in an electric field. It contains:
 - Two electrical conductors and
 - An insulator called dielectric separates the two conductors
- When there is a potential (voltage) difference across the two conductors, an electrical field develops across the dielectric, causing positive charge to collect on one plate and negative charge on the other plate. Energy is stored in the electrostatic field.
- An ideal capacitor is characterized, or described, by a single constant value, capacitance.
