book is the use of the FTT in the exploration of the child's personality using large samples of children derived from diverse cultures. Additional advantages of this book are the chapters which focus on the research into two significant personality traits: aggression and ambivalence, and the chapter on the analysis of idiosyncratic responses. The latter offers valuable information in the classification of original responses into levels of psychopathology. While the FTT has taken significant steps towards becoming a valid and reliable instrument, studies of its psychometric properties are an ongoing process. The book also includes examples, case studies, and appendices for further study and review.
