

SEL-2401 Satellite-Synchronized Clock Instruction Manual

Features, Benefits, and Applications

The role of satellite-synchronized clocks has grown from basic sequence-of-event and fault recorder time referencing to mission-critical roles such as synchrophasor measurement and detailed event analysis. These new applications require that satellite clocks meet the same environmental standards and be as reliable as the protective relays and other high-reliability devices with which these clocks are used.

The SEL-2401 Satellite-Synchronized Clock provides the following features:

- **Reliability.** Apply in harsh environments. Meets IEEE C37.90 and IEC 60255 protective relay surge and environmental standards.
- **Accuracy.** Apply for synchrophasor, relay event correlation, and other high-accuracy timing needs. Demodulated IRIG outputs with accuracy of ± 100 ns average (± 500 ns peak) meet requirements for existing and future timing applications.
- **Low Cost, High Function.** Provide demodulated IRIG-B timecode with time-quality values specified by IEEE C37.118-2005 (Standards for Synchrophasors for Power Systems). A custom DST command and preset daylight-saving time settings for the European Union and the United States of America provide automatic advance and return for daylight-saving time anywhere in the world.
