

Bones, Muscles and Skin

The Skeletal System

There are five major functions of the skeletal system:

1. Enables you to move around
2. Protects internal organs
3. Provides support and determines the shape of your body
4. Stores materials
5. Produces blood cells

The structure of a bone consists of an outer layer of hard connective tissue. Beneath the outer layer is the **compact bone tissue** followed by the **spongy bone tissue**. The spongy bone tissue gives the bone its lightweight and provides strength. The spaces within the bone are filled with **marrow**, a soft connective tissue within bones. The two types of marrow are yellow and red. The **yellow marrow** stores fat and other materials to use for energy when necessary. The **red marrow** produces blood cells for the body.

Cartilage is a connective tissue that is flexible and strong, but softer than bone. Cartilage covers the ends of many bones and acts like a cushion, protecting the bones from being damaged.

Types of joints

Every place in your body where two bones come together is called a **joint**. The body has four kinds of **movable joints** — ball and socket, hinge, pivot, and gliding joints. Immovable joints are joints between bones that do not allow movement. Examples of **immovable joints** are the joints between the bones of the skull.

The Muscular System

Muscles that you are able to control are called **voluntary muscles**. Muscles that you are not able to control are called **involuntary muscles**.

Types of muscles

There are three types of muscle tissue in the human body: **skeletal muscle**, **smooth muscle** and **cardiac muscle**.

Skeletal muscles are voluntary muscles that are attached to the bones of your skeleton. These muscles provide you with the ability to move. At each end of a muscle is a strong connective tissue that attaches your muscles to bones called a **tendon**.

Smooth muscles are involuntary muscles that are on the insides of internal organs. These muscles work automatically to control many functions of the body.

Cardiac muscle has characteristics in common with both skeletal and smooth muscles.

The Skin

The **skin** covers the body, prevents water loss, gathers information from the environment, eliminates waste, protects the body from injury and infection, produces vitamin D, and regulates the body's temperature. There are two main layers of the skin: the **dermis** and the **epidermis**.

The **dermis** is the inner layer of skin, just above a layer of fat, which contains nerves, blood vessels, hairs, oil glands, and sweat glands.

The **epidermis** is the outermost layer of skin that is thinner than the dermis and does not contain blood vessels or nerve cells.

Bones Muscles And Skin Connecting Concepts:

Moving from Growth to Asset-Based Mindsets Linsay DeMartino, Lisa Fetman, 2025-07-30 Promoting a growth mindset in PreK 12 schools is a valuable educational trend based on the idea that students who believe they can grow and improve will succeed more easily. However, when students struggle academically, there is often an undergirded assumption that they and sometimes their families are not trying hard enough or they just need to fit into a standardized mold. This deficit thinking places blame on students' perceived limitations and can lead to lower expectations or biases toward students who come from diversified backgrounds encompassing ability, socioeconomic status, race, language, gender, or culture. As an alternative approach, this book promotes the universal adoption of Asset-Based Practices (ABPs). ABPs encourage educators to see and honor the strengths in each student's identity. ABPs shift our focus to the assets that students and families bring into the classroom, viewing differences as resources rather than obstacles. This means recognizing and building on students' cultural, linguistic, and community-based knowledge to make learning richer and more inclusive for everyone. Implementing an asset-based approach can transform our classrooms. Research shows that students perform better and feel more motivated when they are recognized and valued for who they are. Bringing students' lived experiences into the curriculum can help them develop positive identities and a stronger sense of belonging, which boosts their academic and social growth. Instead of focusing on fixing students, ABPs ask us to adapt our teaching to connect with students' cultural backgrounds and experiences, coupled with recognizing the wealth of knowledge that students bring from their families and communities. Switching to an asset-based approach helps us move away from simply encouraging perseverance or grit in students. Instead, it invites us to take responsibility for creating an environment where every student feels they belong and can succeed. With ABPs, we are able to create more inclusive and affirming classrooms for all students where their identities are seen as strengths, not obstacles, and where their cultural, linguistic, and community knowledge is a foundation for learning. Innovative and creative methodologies and practices that aspiring and practicing educators can use right away are the primary focus of this book. Because the editors and contributors are former or current PreK 12 practitioners and many are also educational scholars, this book is written for a broad educational audience. *Moving from Growth to Asset-Based Mindsets* is for both preservice and practicing teachers across PreK 12 grade levels, school types, and geographic regions looking to improve their practice. To accomplish this, the editors and contributors provide entry points for transforming the educational landscape in favor of liberatory asset-based practices in PreK 12 schools. Additionally, this book is ideal for teacher and administrator preparation programs as well as PreK 12 professional development because it guides readers through theoretical and empirical discussions supported by hands-on applications that enable real-time application and concludes with interactive features like case studies, extension activities, and discussion prompts.
