

DIFFERENT TYPES OF **BINDING** TECHNIQUES

Refer to the following types of binding techniques to choose the most suitable one for your next project.

01

Saddle Stitching

The easiest and most economical technique. A stapler with long jaws is used to fold, crease and staple the pages. This method is ideal for documents with smaller page counts such as booklets, look books and magazines.

Perfect Binding

Unlike saddle stitching, the pages are bound by gluing instead of stapling. Sections of pages are folded (spines trimmed off) and coated with glue to wrap around a solid cover. Ideal for paperback and softcover books such as manuals and catalogues.

03

Tape Binding

In this method, an adhesive tape is used to wrap the pages (spines) and hold the cover. To provide added strength, pages are stitched together before wrapping the tape.

02

Spiral Binding

Holes are punched through the pages and wire or plastic coils are threaded through the holes. The ends of the coil are crimped to prevent the wire from slipping. This method is used to create fancier documents generally found in schools and universities.

05

Screw Binding

This method makes the document easy to change and update. First, holes are drilled through all the pages and then a barrel post is inserted through the holes. Lastly, to hold everything together, a cap screw is attached to the post. This technique is ideal for portfolios and photo albums.

04

The binding technique you choose depends on the functionality and the number of pages of the document. Also, the type of binding method plays a vital role in determining the overall look of your document.
