Rajamani,2020-05-27 The holy grail for prognostics and health management PHM professionals in the aviation sector is to have integrated vehicle health management IVHM systems incorporated into standard aircraft maintenance policies Such a change from current aerospace industry practices would lend credibility to this field by validating its claims of reducing repair and maintenance costs and hence the overall cost of ownership of the asset Ultimately more widespread use of advanced PHM techniques will have a positive impact on safety and for some cases might even allow aircraft designers to reduce the weight of components because the uncertainty associated with estimating their predicted useful life can be reduced We will discuss how standard maintenance procedures are developed who the various stakeholders are and based on this understanding outline how new PHM systems can gain the required approval to be included in these standard practices

There have been a few limited successes in this field already and we will discuss the lessons learned in developing these systems. Finally, we will review the progress that the structural health management SHM community has made and continues to make to change the way the industry regards automated SHM systems. A Directory of Computer Software Applications, 1978 **Aerospace Engineering**, 2007 **Human Processor Models to Outline the Pilot Assistance Required for Single Pilot Operations** Jan Lukas Augustin, 2015-06-03 Bachelor Thesis from the year 2015 in the subject Engineering Mechanical Engineering grade 1.7 Hamburg University of Technology Institut für Lufttransportsysteme language English abstract The object of this thesis is to outline prospective assistance systems enabling a pilot to fly an airliner single handedly. A cognitive modelling technique called Model Human Processor is introduced. Procedures and tasks involved in the operation of an aircraft are identified. Assumptions with respect to the single pilot design alternative are made. A simulation is implemented in Matlab in order to assess the pilot's workload. Results allow for a procedure time and workload comparison of the two flight crew alternatives. The outcome of this analysis facilitates the design of potential additional pilot support systems that can reduce workload and improve situational awareness.
