Bayesian Data Analysis, Second Edition Andrew Gelman, John B. Carlin, Hal S. Stern, Donald B. Rubin, 2003-07-29
Incorporating new and updated information this second edition of THE bestselling text in Bayesian data analysis continues to emphasize practice over theory describing how to conceptualize perform and critique statistical analyses from a Bayesian perspective Its world class authors provide guidance on all aspects of Bayesian data analysis and include examples of real statistical analyses based on their own research that demonstrate how to solve complicated problems Changes in the new edition include Stronger focus on MCMC Revision of the computational advice in Part III New chapters on nonlinear models and decision analysis Several additional applied examples from the authors recent research Additional chapters on current models for Bayesian data analysis such as nonlinear models generalized linear mixed models and more Reorganization of chapters 6 and 7 on model checking and data collection Bayesian computation is currently at a stage where there are many reasonable ways to compute any given posterior distribution However the best approach is not always clear ahead of time Reflecting this the new edition offers a more pluralistic presentation giving advice on performing computations from many perspectives while making clear the importance of being aware that there are different ways to implement any given iterative simulation computation The new approach additional examples and updated information make Bayesian Data Analysis an excellent introductory text and a reference that working scientists will use throughout their professional life **Bayesian Data Analysis** Andrew Gelman, John B. Structural Equation Modeling Gregory R. Hancock, Ralph O. Mueller, 2013-03-01 Sponsored by the American Educational Research Association's Special Interest Group for Educational Statisticians This volume is the second edition of Hancock and Mueller's highly successful 2006 volume with all of the original chapters updated as well as four new chapters The second edition like the first is intended to serve as a didactically oriented resource for graduate students and research professionals covering a broad range of advanced topics often not discussed in introductory courses on structural equation modeling SEM Such topics are important in furthering the understanding of foundations and assumptions underlying SEM as well as in exploring SEM as a potential tool to address new types of research questions that might not have arisen during a first course Chapters focus on the clear explanation and application of topics rather than on analytical derivations and contain materials from popular SEM software

Bayesian Statistical Modelling P. Congdon, 2001-05-02 Bayesian methods draw upon previous research findings and combine them with sample data to analyse problems and modify existing hypotheses The calculations are often extremely complex with many only now possible due to recent advances in computing technology Bayesian methods have as a result gained wider acceptance and are applied in many scientific disciplines including applied statistics public health research medical science the social sciences and economics Bayesian Statistical Modelling presents an accessible overview of modelling applications from a Bayesian perspective Provides an integrated presentation of theory examples and computer algorithms Examines model fitting in practice using Bayesian principles Features a comprehensive range of methodologies and modelling techniques Covers recent innovations in bayesian modelling including Markov Chain Monte Carlo methods Includes extensive applications to health and social sciences Features a comprehensive collection of nearly 200 worked examples Data examples and computer code in WinBUGS are available via ftp Whilst providing a general overview of Bayesian modelling the author places emphasis on the principles of prior selection model identification and interpretation of findings in a range of modelling innovations focussing on their implementation with real data with advice as to appropriate computing choices and strategies Researchers in applied statistics medical science public health and the social sciences will benefit greatly from the examples and applications featured The book will also appeal to graduate students of applied statistics data analysis and Bayesian methods and will provide a good reference source for both researchers and students

Probabilistic Machine Learning Kevin P. Murphy, 2023-08-15 An advanced book for researchers and graduate students working in machine learning and statistics who want to learn about deep learning Bayesian inference generative models and decision making under uncertainty An advanced counterpart to Probabilistic Machine Learning An Introduction this high level textbook provides researchers and graduate students detailed coverage of cutting edge topics in machine learning including deep generative modeling graphical models Bayesian inference reinforcement learning and causality This volume

puts deep learning into a larger statistical context and unifies approaches based on deep learning with ones based on probabilistic modeling and inference With contributions from top scientists and domain experts from places such as Google DeepMind Amazon Purdue University NYU and the University of Washington this rigorous book is essential to understanding the vital issues in machine learning Covers generation of high dimensional outputs such as images text and graphs Discusses methods for discovering insights about data based on latent variable models Considers training and testing under different distributions Explores how to use probabilistic models and inference for causal inference and decision making Features online Python code accompaniment

Telling Stories with Data Rohan Alexander, 2023-07-27 The book equips students with the end to end skills needed to do data science That means gathering cleaning preparing and sharing data then using statistical models to analyse data writing about the results of those models drawing conclusions from them and finally using the cloud to put a model into production all done in a reproducible way At the moment there are a lot of books that teach data science but most of them assume that you already have the data This book fills that gap by detailing how to go about gathering datasets cleaning and preparing them before analysing them There are also a lot of books that teach statistical modelling but few of them teach how to communicate the results of the models and how they help us learn about the world Very few data science textbooks cover ethics and most of those that do have a token ethics chapter Finally reproducibility is not often emphasised in data science books This book is based around a straight forward workflow conducted in an ethical and reproducible way gather data prepare data analyse data and communicate those findings This book will achieve the goals by working through extensive case studies in terms of gathering and preparing data and integrating ethics throughout It is specifically designed around teaching how to write about the data and models so aspects such as writing are explicitly covered And finally the use of GitHub and the open source statistical language R are built in throughout the book

Key Features Extensive code examples Ethics integrated throughout Reproducibility integrated throughout Focus on data gathering messy data and cleaning data Extensive formative assessment throughout

Case Studies in Bayesian Statistics Constantine Gatsonis, James S. Hodges, Robert E. Kass, Robert E. McCulloch, Peter Rossi, Nozer D. Singpurwalla, 1997-06-05 Like the first two volumes this third volume of case studies presents detailed applications of Bayesian statistical analysis emphasizing the scientific context The papers were presented and discussed at a workshop at Carnegie Mellon University October 5-7 1995 In this volume which is dedicated to the memory of Morris H DeGroot

econometric applications are highlighted There are six invited papers each with accompanying invited discussion and eight contributed papers which were selected following refereeing In addition we include prefatory recollections about Morrie DeGroot by James O Berger and Richard M Cyert INVITED PAPERS In Probing Public Opinion The State of Valencia Experience Jose Bernardo who was a scientific advisor to the President of the State of Valencia Spain summarizes procedures that were set up to probe public opinion and were used as an input to the government's decision making process At the outset a sample survey had to be designed The problem of finding an optimal Bayesian design based on logarithmic divergence between probability distributions involves minimization over 21483 points in the action space To solve it simulated annealing was used The author describes the objective of obtaining the probability that an individual classified in a certain group will prefer one of several possible alternatives and his approach using posterior distributions based on reference priors
