The Encyclopedia of American Literature gathers together 350 essays from over 190 leading scholars on the whole of American literature from European discovery to the present. At the core of the Encyclopedia lie 250 essays on poets, playwrights, essayists, and novelists. Figures such as Whitman, Melville, Faulkner, Frost, and Morrison are discussed in detail, with each examined in the context of his or her times, an assessment of the writer's current reputation, a bibliography of major works, and a list of major critical and biographical works about the writer. Fifty entries on major works such as *Moby Dick*, *Song of Myself*, *Walden*, *The Great Gatsby*, *The Waste Land*, *Their Eyes Were Watching God*, *Death of a Salesman*, and *Beloved* place the work in its historical context and offer a range of possibilities with regard to critical approach. The Encyclopedia also contains essays on literary movements, periods, and themes, pulling together a broad range of information and making connections between them. Each entry has its own primary and annotated secondary bibliography, and a system of cross references helps readers locate information with ease. The Encyclopedia of American Literature is an outstanding reference source for students studying authors or particular pieces of literature, libraries looking for one comprehensive source, and readers interested in American literature, its authors, and its connection with various areas of study.

Hollywood Science Sidney Perkowitz, 2007-12-11 Whether depicting humans battling aliens or a brave geologist saving lives as a volcano erupts, science fiction films are an exciting visual and sensuous introduction to the workings of science and technology. These films explore a range of complex topics in vivid and accessible ways, from space travel and laser technology to genetic engineering, global warming, and the consequences of nuclear weaponry. Though actual scientific lab work might not be as exciting, science fiction is an engaging yet powerful way for a wide audience to explore some of the most pressing issues and ideas of our time. In this book, a scientist and dedicated film enthusiast discusses the portrayal of science in more than one hundred films, including science fiction, scientific biographies, and documentaries. Beginning with early films like *Voyage to the Moon* and *Metropolis* and concluding with more recent offerings like *The Matrix*, *War of the Worlds*, *A Beautiful Mind*, and *An Inconvenient Truth*, Sidney Perkowitz questions how much faith we can put into Hollywood's depiction of scientists and their work, how accurately these films capture scientific fact and theory, whether cataclysms like our collision with a comet can actually happen, and to what extent these films influence public opinion about science and the future. Movies, especially science fiction films, temporarily remove viewers from the world as they know it and show them the world as it might be, providing special perspective on human nature and society. Yet Hollywood science can be erroneous, distorting fact for dramatic effect and stereotyping scientists as remote and nerdy, evil or noble, doing little to improve the relationship between science and society. Bringing together history, scientific theory, and humorous observation, *Hollywood Science* features dozens of film stills and a list of the all-time best and worst science fiction movies. Just as this genre appeals to all types of viewers, this book will resonate with anyone who has been inspired by science fiction films and would like to learn how fantasy compares to fact. *The Wandering Earth* Cixin Liu, 2013-06-27 *The Wandering Earth* is a collection of short
