

Effects of Climate Change

The global temperature is forecast to be around 1.20°C in 2033 - one of the Earth's hottest years ever recorded.

Globally aviation accounts for 2.5% of CO2 emissions, but they also contribute twice as much to global warming with nitrogen oxides (NOx), vapour trails, and cloud formation triggered by the altitude at which they fly.

Climate change directly increases severe weather events, such as forest fires, hurricanes and droughts.

Manufacturing, particularly of construction materials, accounts for a third of global greenhouse gas emissions.

Increasing temperatures are causing a loss of ice and melting permafrost, which affects wildlife such as polar bears, walrus, reindeer and many other species. It also leads to increased sea levels and the risk of floods.

Deforestation and the destruction of forests through weather events, reduce their ability to store carbon and provide other ecosystems.

Sea levels globally are rising by 3.7mm per year. By 2050, sea levels are predicted to rise by around 30cm. This will cause more coastal flooding and erosion.

Increased ocean temperatures have caused over half of coral reef cover across the world to be lost. This means the loss of biodiversity, habitats for fish and other species, and the natural barrier to sea storms for coastal communities.

Bhandari, 2022-09-01 Getting the Climate Science Facts Right discusses climate change science with reference to the Intergovernmental Panel on Climate Change IPCC Addressing climate change is the most important public priority of the 21st Century Unlike many issues however this issue is being driven by both science and its interface with politics The main institution for bridging this division between science and international politics is the IPCC As such it is the main source of the facts from which climate change policy is developed This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based Seldom in history has science had such a

direct relationship with politics The negotiation of an international policy regime requires at its outset an agreement on the facts In this case the facts are scientific complex and contentious Governments have recognized this and have by using the IPCC set up institutional machinery to provide facts from a source and in a manner that they can accept The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level Starting with a process to examine review and debate scientific findings leading to a consensus about scientific fact usually expressed as probabilities that the findings will hold over time the IPCC then concludes by using the kind of consensus development mechanism that the United Nations typically uses to achieve agreements leading to the formation of policy regimes The book examines the structure of the IPCC its composition and its procedures in order to achieve an understanding of its role and future

The Role of the IPCC in the Understanding of Climate Change Patrick Kimuyu, 2017-11-06 Essay from the year 2016 in the subject Politics Environmental Policy grade 1 Egerton University Public Health course Climate Change language English abstract Climate change seems to be a unique phenomenon owing to the numerous controversies surrounding it This is why there exists a great divide between environmentalists and their challengers over the issue of climate change To the present the debate on climate change has taken diverse perspectives in which the critical issue is whether climate change is a factual or false phenomenon In order to enhance understanding over the issue of climate change a number of international agencies have been formed One of the most proactive agencies that have immense contribution to the issue is the Intergovernmental Panel on Climate Change IPCC This scientific

intergovernmental body was established in 1988 by the United Nations Environment Programme UNEP and the World Meteorological Organization WMO Following its endorsement by the UN General Assembly the same year IPCC became one of the organizations under the auspices of the UN Its core responsibility is to review and assess scientific socio economic and technical information related to climate change and prepare assessment reports for the United Nations Framework Convention on Climate Change UNFCCC Its reports focus on the risks of human induced climate change as well as its potential socio economic and environmental impacts As such IPCC reports propose the most appropriate mitigation approaches to climate change Since its inception IPCC has contributed immensely to the assessment of climate change Therefore this paper provides a comprehensive discussion on IPCC s contribution to the climate change debate It will also present a critical assessment of the linkage between the agency s values and interests its advocacy positions and its use of science

McGrath, 2023-08-08 The goods that we pursue in our lives are for us first and foremost goods that are particular and personal and thus goods that are immediate to our attention Not readily apparent to us are goods necessary for the flourishing of our lives but that can be attained by us only in consort with others and thus realized only through collective action Such goods are common goods The wider the good the more extensive must be the human cooperation to realize the good A stable orderly society and a habitable planetary environment are common goods that can be realized only in and through the cooperation of all for the benefit of all That all contribute to the shared good of the whole is a matter of justice social justice Acting for the Common Good undertakes the study of social justice in light of the common good this from the viewpoint of Catholic social teaching which draws upon the tradition of the common good that is articulated classically in the philosophy of Aristotle and the theology of Thomas Aquinas and in the modern day social thought and authoritative teachings of the Catholic Church *State of the Climate Report* ,1997 **Climate Change and the Media** Tammy Boyce, Justin Lewis, 2009 It is now more than a quarter of a century since the Intergovernmental Panel on Climate Change published their first comprehensive report on the dangers posed by anthropogenic global warming Over the last twenty five years the weight of evidence about the causes and consequences of climate change has become compelling The solutions are fairly simple we must switch to more sustainable and efficient forms of energy production And yet they remain elusive globally we produce significantly more greenhouse gases now than we did back in 1990 The sad truth is that this inaction has made climate

change inevitable the only question that remains is whether we can prevent it spiraling out of control How do we explain this colossal global failure The problem is political rather than scientific we know the risks and we know how to address them but we lack the political will to do so The media are pivotal in this equation they have the power to set the public and the political agenda Climate Change and the Media Volume 2 gathers contributions from a range of international scholars to explore the media s role in our understanding of the problem and our willingness to take action Combined these chapters explain how and why media coverage has to date fallen short in communicating both the science and the politics of climate change They also offer guidance about how the media might shift from being the problem to becoming part of the solution **Warming**
