Dramatic improvements in functionality and performance were made, including support for social collaboration and mobile devices. Recently, APIs that make modern client-side development easy have been introduced as well. The underlying technology platform has migrated from ASP.NET 2.0 to ASP.NET 4.0, and DNN has also integrated Microsoft's Web API as the service framework at the core of the DNN solution. All of these enhancements provide developers with a lot of power in one solution.

He will expand this initial chapter with information about venture capital funding, commercialization, and software business insights, which will be of interest to DNN enthusiasts as well as technology entrepreneurs. DNN site builders, administrators, and developers will learn how to determine if they have met the installation requirements and install DNN, administer and host a DNN site, and install and configure modules, manage users, and keep a DNN installation secure. Localize a DNN site for multiple languages, build custom DNN modules in C# using the model of separation of database, business logic, and presentation layers, customize the DNN look with skinning, make their site social with EVOQ.
