An Introduction to Statistics using Microsoft Excel Dan Remenyi, George Onofrei, Joseph English, 2022-01-01 A significant amount of academic research has been conducted using quantitative research methods In many universities large and

expensive statistical software has been acquired However much of this software requires a considerable amount of training before researchers are capable of using it correctly and this can cause difficulties Many academic researchers are surprised by just how much analytical work can be done using the ubiquitous Microsoft Excel software This book presents a course on the use of statistics in academic research starting with simple descriptive techniques and working through to sophisticated inferential methods A step by step approach has been taken and has been described by users of this book as similar to having the teacher standing by you as you learn about some of the sophisticated methods of handling and understanding data Readers of this book have my best wishes in achieving their objectives through their work with academic research

Statistical Methods for Food Science John A. Bower, 2013-09-23 The recording and analysis of food data are becoming increasingly sophisticated Consequently the food scientist in industry or at study faces the task of using and understanding statistical methods Statistics is often viewed as a difficult subject and is often avoided because of its complexity and a lack of specific application to the requirements of food science This situation is changing there is now much material on multivariate applications for the more advanced reader but a case exists for a univariate approach aimed at the non statistician This second edition of Statistical Methods for Food Science provides a source text on accessible statistical procedures for the food scientist and is aimed at professionals and students in food laboratories where analytical instrumental and sensory data are gathered and require some form of summary and analysis before interpretation It is suitable for the food analyst the sensory scientist and the product developer and others who work in food related disciplines involving consumer survey investigations will also find many sections of use There is an emphasis on a hands on approach and worked examples using computer software packages and the minimum of mathematical formulae are included The book is based on the experience and practice of a scientist engaged for many years in research and teaching of analytical and sensory food science at undergraduate and post graduate level This revised and updated second edition is accompanied by a new companion website giving the reader access to the datasets and Excel spreadsheets featured in the book Check it out now by visiting www.wiley.com/go/bowerstatistical or by scanning the QR code below

American Book Publishing Record, 2006

An Introduction to Statistics using Microsoft Excel 2nd Edition Dan Remenyi, George Onofrei, Joseph English, 2015-05-26 The handling of numbers in arithmetic and the progression into the more abstract field of mathematics and statistics is generally approached poorly in our education system The inadequacy is not necessarily in the teaching techniques or the books and other text used but rather in the attitude towards these subjects These subjects are seen as something which has to be taught because it is

part of a preordained curriculum rather than a set of tools which are available to help people live a fuller more productive and more interesting life It is so enlightening when one hears people say I thought that when I left school I was leaving all the maths stuff behind me or I was bored witless by all those numbers and formulas sic that were forced down my throat This book was written out of a frustration at seeing statistics taught through formal methods using large scale statistic software packages It seemed to me that very little was learned by this process and quite often both the teachers and the students were in denial It is true that the students were generally able to pick up enough knowledge to pass an examination or to complete a piece of research But I seldom saw anything which could be regarded as deep learning and the little which had been learned did not stay for any length of time in the heads of these learners I know people who have passed several university level courses in statistics and they can hardly recall never mind use any of what was taught to them
