

Lift Mechanisms and Controls

(See Group 34 for detailed test procedure.)

1. Check the function of the lift system and controls with the engine running.
2. Pull back on the tilt control lever and hold until the upright reaches the full back tilt position. Push forward on the lever to return the upright to the vertical position. Release the lever.

If there is excessive play between rails and channels, upright adjustment is required. If there is racking, adjustment of the cylinder rod yokes is required.

**CAUTION**

Be sure that there is adequate overhead clearance before raising the upright.

3. Pull back on the lift control lever and raise the fork carriage to full height. Watch the upright assembly as it rises. All movements of the upright, fork carriage, and lift chains must be even and smooth, without binding or jerking. Watch for chain wobble or looseness; the chains should have equal tension and move smoothly without noticeable wobble.

Release the lever. Control levers should not stick and should return to neutral when released.

**CAUTION**

Do not put hands in upright.

If the maximum fork height cannot be reached, this indicates there is low oil level in the hydraulic sump or severe binding within the upright.

4. Push forward on the lift control lever. Watch the upright as it lowers. Lowering should be smooth and even. If you suspect a problem with lifting or lowering speeds, refer to Group 34 to diagnose the problem.

Auxiliary Controls

If the truck is equipped with an attachment, test the control lever for correct function and operate the attachment to check its function.

When you have completed the operational tests, park and leave truck according to standard shutdown procedures. Be sure to make a record of all maintenance and operating problems you find.

Air Cleaning the Truck**CAUTION**

Wear suitable eye protection and protective clothing.

Remove floorplate, then air clean the following: upright assembly, drive axle, radiator from both counterweight and engine sides, engine and accessories, driveline and related components, and steer axle and steer cylinder.

Use an air hose with special adapter or extension that has a control valve and nozzle to direct the air properly. Use clean, dry, low-pressure compressed air. Restrict air pressure to 30 psi (207 kPa), maximum. (OSHA requirement).

It is important to maintain a lift truck in a clean condition. Do not allow dirt, dust, lint or other contaminants to accumulate on the truck. Keep the truck free from leaking oil and grease. Wipe up all oil or fuel spills. Keep the controls and floorboards clean, dry, and safe. A clean truck makes it easier to see leakage, loose, missing, or damaged parts, and will help prevent fires. A clean truck will run cooler.

The environment in which a lift truck operates determines how often and to what extent cleaning is necessary. For example, trucks operating in manufacturing plants which have a high level of dirt, dust or lint, (e.g. cotton fibers, paper dust, etc.) in the air or on the floor or ground, require more frequent cleaning. The radiator, especially, may require daily air cleaning to ensure correct cooling. If air pressure does not remove heavy deposits of grease, oil, etc., it may be necessary to use steam or liquid spray cleaner.
